

till they get one of their own. Ask for further details in case you haven't found an address !

PROMO-SPOTS:

2 promo-spots for RT, produced by JB Productions and Low Quality Productions (the name has nothing to do with the real quality of the promo spots), are available. Free Radio stations can obtain them free of charge ! Other DXers or stations who want to support our finances can obtain their copy for 2-3 IRCs or triple return postage.

RENEWAL OF SUBSCRIPTIONS:

The number on the envelope right near your name gives you the information when your subscription to RT will run out. For example, 128 means that RT 128 is the last issue you get for your money/subscription. Together with the last issue you receive, you will find an information sheet enclosed giving you the latest subscription rates. It's then up to you to decide whether you will continue your sub (which we all hope) or not. If not, please be so kind to drop us a line so that we can cross out your name on our list of subscribers.

SAE-SERVICE:

This service is offered to everybody who likes to avoid buying those expensive tiny coupons called IRCs. Most stations nowadays accept an SAE as a method of providing return postage.

We presently have in stock:

- a) Dutch 75 ct stamps
 - b) British 18 p stamps
 - c) German 80 Pf stamps (without any limit !)
- } not more than 5 stamps per order

How to order then ? UK DXers, please send one 18p stamp for each foreign stamp you order (the same applies for DXers in Holland (75ct per stamp), West-Germany (80Pf per stamp) and Ireland (28p per stamp)) ! DXers from other countries, please write us for further details !

Stamps will be mailed off together with the next issue of RT (except printed matter subscribers who must enclose return postage).

TAPE-SERVICE:

Do you want to hear your favourite FR-station in studio quality ? Or do you like to listen to the first programmes of German private stations like Radio Schleswig-Holstein, Radio ffn or Radio Hamburg ? Or do you just prefer to hear stations from the other parts of the world (e.g. USA, Australia, Japan, Peru, Ireland and many more) ? Or why not celebrating New Year's Eve together with the good old offshore station Radio Northsea Int'l ?

If you like to listen to such tapes, you should make use of the RT-Tape Service. We offer you more than 100 different tape-recordings of private and pirate stations from all over the world (in FM or studio quality !). All recordings are taped on chromdioxid cassettes and can be obtained for the following prices (incl. p & p):

- C-60 : DM 8,- / £ 3 / skr 30 / hfl 10 / FMK 20 / FFr 30;
- C-90 : DM 10,- / £ 3.50 / skr 35 / hfl 10 / FMK 25 / FFr 35;
- C-120: DM 12,- / £ 4 / skr 45 / hfl 15 / FMK 30 / FFr 40;

Ask for our current tape-list which can be obtained for double return postage or 1 IRC !

By the way, we promise that all money we earn with this Tape-Service will be used for RADIOTELEX (improvements, covering postal expenses, adverts etc.) !

Issue 115 / Vol. 5

06th January 1988

c/o P.O. Box 10 37 71, D-2600 Bremen 1, West Germany.

The first RT - issue in 1988,

And the first mishaps occurred too. First of all, we've missed the regular phone-call of Anoraks UK last Sunday (please ring in on 17th January ! Thanks in advance).

But the worst mishap concerns the SAE-Service. As we had no Dutch stamps in stock, we've ordered some new ones. We were told that the letter with those new stamps was mailed off on 15th December 1987 (from FRG). But unfortunately, that letter didn't reach us till now ! We don't know what has happened, maybe this letter was lost or misplaced, only heaven knows. All we can do is to complain to the post office and to order some new ones again. Anyway, those persons who have ordered Dutch stamps from our SAE-Service must be patient please ! We have noted your stamp order and you will receive your stamps as soon as possible !

Well, before starting with the logbook, we advise you to read the enclosed A-Z info sheet very carefully, because it is a complete survey about all services we offer and will hopefully also answer all your questions regarding RT. From now onwards, that info sheet will be sent to every new subscriber.

Last but not least, we wish to thank all contributors of this issue (15 loggers !). Special thanks also to those kind persons who had sent us their Christmas greetings in the past weeks !

A - Z

Info-sheet 1988

c/o P.O. Box 10 37 71. D-2800 Bremen I. West Germany.

This info sheet gives you a complete survey about the services we offer to our subscribers and shall also answer some of your questions you may have.

ABBREVIATIONS (used in RT):

E = English; F = French; G = German; D = Dutch; S = Spanish; adr = address;
 UK = United Kingdom of Great Britain; CON = Continent; SCA = Scandinavia;
 rel = religious; px = programme; tx = transmitter; // = in parallel to;
 0900- = sign on at 0900 UTC; -1000 = sign off/close down at 1000 UTC;
 UNID = unidentified station; tent = tentative; RP = return postage;
 DRP = double return postage; SAE = self-addressed and stamped envelope;

ADVERTS:

Adverts of less than 5 lines are free of charge. All other adverts cost DM 10,-/£ 3/US-D 6/9 IRCs (other rates upon request) per page. If you want us not to mention your name and address in the advert, you can use the RT-address. We will forward all letters we received to you, but you have to repay our postal expenses then !

CONTRIBUTION:

Your contribution is always welcome ! You can contribute by sending us your logs, news and QSL surveys. If you prefer to phone us regularly on Sundays in order to give us your latest logs and news, please drop us a line and we will send you our phone-number (free of charge) ! Of course, we also accept contribution by way of money which will be used for improvements of the magazine, postal expenses, adverts etc. in order to make RT more popular and far better than it is at present.

DEADLINES:

The deadline for the next issue is mentioned at the end of the last page of RT. It is usually every two weeks on Sunday, 17.00 UTC. So, ring in or write us your letter just in time ! Please note, that our post box is usually not cleared on Saturdays and Sundays (exceptions prove the rule) !

BACK ISSUES:

All back issues of RT (back to No. 1) are still available and can be obtained for the normal price of a single issue (DM 1.20/1 IRC each (other rates upon request)).

P.O.Box 103771:

In order to avoid that your letter may be returned to the sender, we advise you to write only "R.T." on the envelope instead of our full name. Or just omit "R.T." and any other names or abbreviations by writing only the P.O.Box number etc. on the envelope. Anyway, don't forget to write "c/o" (care of) before the P.O.Box number ! Usually, our P.O.Box is not available for any radio stations. But exceptions prove the rule here, too. Sometimes, we allow stations (outside Germany only !), which haven't found an address yet, to use our post box

AIRR.

History

4IFR - New Zealand had it's first relay via Westside Radio International in 1986 where two programmes were aired, but programmes were made in mono on poor quality equipment in a makeshift studio here in New Zealand .
In 1987 it was decided to get relayed 4IFR - New Zealand programmes aired regularly via Westside Radio International and this started in May 1987 and programmes are produced in Stereo , In the permanent Studio's of 4IFR - New Zealand .

4IFR - New Zealand Format

The aim is to play mainly New Zealand and Australian Music and also for DXer's Top 40 Rock will be also played and Rock Oldies, But as said the main aim is to play New Zealand and Australian Music .

4IFR - New Zealand sends a QSL to all reception reports recieved via Airmail and to get this done this way, 4IFR asks that 2 or 3 IRC's be enclosed with your reception report.

4IFR in future is hoping one day to set up a FM Transmitter here in New Zealand .

All reception reports and inquires can be sent via

310 Collins Ave , West
Whitehall, Dublin 9
Ireland

L A T E S T N E W S

Alternative Music & Entertainment Channel (AMEC) is a new German station transmitting once a month via Radio Tutenchamun in the 48 mb. The OP's of AMEC, Geoffrey Waldorf and Brian McNamara, announce the following incredible line-up:
"Laser Drive" (introducing new CD's), "The Dusty Shelf" (AMEC's Oldies Show), "Megacycle" ((FR)-DX programme), "Vertical Take-Off" (AMEC's Top Ten), "The Pleasure's Yours" (Request programme), "Listeners' Digest" (mail answering), "Zoom" (the latest from the movies etc.), "AMEC-Chronicle" (historical highlights worth to be remembered), "Soundabout" (news, views and facts from the world of music), "Chartbusters" (songs climbing up the European charts) and "AMEC-Special" (well, nobody knows yet)
All programmes are entirely presented in English and listeners' mail is highly appreciated at c/o P.O.Box 2542, 2300 Kiel 1, West-Germany.

Alternative Vatican Radio told us that some QSL cards which had been send back to listeners seem to have been lost by the postal authorities. As their former address in Cornwall is no longer available, they are searching for another maildrop in the UK. As soon as they have found another address, listeners should write in again. AVR hopes to be back on 6250 kHz very soon.

According to the DPM-Newsletter, Radio Digital, recently heard on 6205 kHz, uses the following address: Postbus 25, 8160 Diskmuide, Belgium.

"the big wide wonderful world of radio"
at your feet. •FRS SALES PRODUCTIONS•
pb-41-dedemsvaart-holland.

Radio Duck can be also contacted under a new address: BM Nectar, London WC1N 3XX, England.

Radio Pamela again announced a new address in its programmes: 10 Bromyard Crescent, Paulsgrove, Portsmouth, Hants, UK.

A Dutch programme of Radio Pogo 104 (c/o Wuppertal), produced by Henk of Radio Indigo, is planned to be broadcast via Radio Waves Int'l soon. The frequency is likely 6271 kHz, RWI's new one. By the way, the Radio Telstar log in RT 114 (Updater 06/12; 6296 kHz) was infact an off air recording of the opening programme of the famous Belgian-German FM station in January 1987, and was part of the Radio Pogo programme.

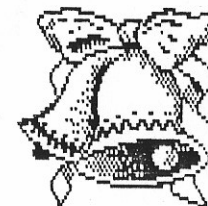

Due to the departure of Kieren Murray, Radio Rainbow Int'l seems to be just before the suspension of its programmes. In the latest edition of "Weekly Report", Radio Rainbow offered airtime to every Free Radio station for £ 10 per hour. In case they will not find enough hirers, the whole equipment (400 W SW, 1 kW MW and 50 W FM stereo transmitters) is for sale. Contact address for both is Heady Eddie, 151 Moneymore, Drogheda, Co. Louth, Eire.

Radio Waves International (c/o B.P. 130, 92504 Rueil Cedex, France) informs us that they will be relayed via Radio Indigo's small medium wave transmitter soon. A special QSL card will be also available for that programme.
On 26th December 1987, reception and modulation of RWI on 6271 kHz were far better than usual. So it is likely that RWI has used the new 50 watts rig. According to their info sheet, the old 18 W rig will be used for transmissions in the 41 m.b. then. Any logs ???

Weekend Music Radio and Radio Orion were the latest victims of a new British-based jamming station using a 760 Hz tone. On Christmas Sunday, WMR were jammed by that dubious "station" on all frequencies they've used just after sign on. Following the jammer against WMR, Mr. Gary St. John felt obliged to denounce the jamming by using the name Voice Of Free Radio on 6318 kHz at 14.13 UTC (after c/d of WLR), and gave that 760 Hz tone jammer the fitting name Zero IQ. The answer of Zero IQ following that denunciation was - a jammer on 6318 kHz of course (at 14.16 UTC) ! Zero IQ - Free Radio of the worst type !

And that's it for today. Deadline for RT 116 is on +++ 17th January 1988 +++ By the way, all letters we received for IOBS were mailed off on 06/01/1988 (on their long way to India). Watch out for RT 116 which will also contain the SW-FR statistics 1987 ! Many Free Radio greetings, TRV

BEST WISHES

SW HOBBY PIRATES STATISTICS

1987

162 (1986: 164) different pirate stations could be received in Europe in 1987. Commercial (e.g. Boyneside Radio, Radio Caroline, Radio West, Radio Telstar Int'l (BEL)) and religious stations (Good News Radio, European Christian Radio etc.) were not counted, because those stations are not run as a hobby !

However, if we also take such stations in consideration we would count a total of 185 different Free Radio stations. But as mentioned above, in the following statistics we will only consider those 162 hobby pirates. These 162 stations are divided into the following countries of origin (in brackets are the comparative figures of 1986):

Great Britain.....	57 Stns = 35.2% (54/32.9%)
West Germany.....	36 Stns = 22.2% (40/24.4%)
Netherlands.....	36 Stns = 22.2% (29/17.7%)
Ireland.....	10 Stns = 6.2% (15/ 9.2%)
Scandinavia.....	5 Stns = 3.1% (9/ 5.5%)
France.....	4 Stns = 2.5% (3/ 1.8%)
Belgium.....	3 Stns = 1.9% (3/1.8%)
USA.....	3 Stns = 1.9% (5/ 3.0%)
New Zealand.....	2 Stns = 1.2% (1/ 0.6%)
Canada.....	1 Stn = 0.6% (---/---)
India.....	1 Stn = 0.6% (---/---)
Switzerland.....	1 Stn = 0.6% (2/ 1.2%)
Others (country unknown).....	3 Stns = 1.9% (3/ 1.8%)

These statistics garbled the real activity of each country at the weekends. There were many stations in the past year which were only one or two times on the air. So we gave each station one point per transmitting day resulting in a total of 1486 points (1986: 1555 pts):

Great Britain.....	563 pts = 37.9% (462/29.8%)
West Germany.....	347 pts = 23.4% (378/24.3%)
Ireland.....	188 pts = 12.7% (308/19.8%)
Netherlands.....	173 pts = 11.6% (208/13.4%)
Belgium.....	70 pts = 4.7% (66/ 4.2%)
France.....	66 pts = 4.4% (67/ 4.3%)
Scandinavia.....	25 pts = 1.7% (16/ 1.0%)
USA.....	24 pts = 1.6%
New Zealand.....	12 pts = 0.8%
Canada.....	11 pts = 0.7%
India.....	2 pts = 0.1%
Switzerland.....	1 pt = 0.1% (2/ 0.1%)
Others (country unknown).....	4 pts = 0.3% (5/ 0.3%)

altogether
49 pts (43)
= 3.3% (2.8%)

Here are still the 20 most active stations of 1987:

1. (1) Radio Orion....	99 pts	11. (--) Riverside Radio....	30 pts
2. (2) Westside Radio.	53 pts	12. (--) Britain R. Int'l....	26 pts
3. (5) Radio 101.....	46 pts	12. (11) P F B S.....	26 pts
4. (12) Radio Waves Int	42 pts	12. (--) Weekend Music Radio	26 pts
5. (8) Radio Pamela...	41 pts	15. (--) Satellite BC Company	25 pts
6. (7) Radio Delmare..	34 pts	16. (--) R. East Coast Comm.	24 pts
6. (6) R. Skywave Int.	34 pts	16. (--) R. Stella Int'l....	24 pts
6. (--) W.L.R.....	34 pts	18. (14) 4FWS/RRR.....	23 pts
9. (--) Spectrum Leisure	33 pts	18. (--) Radio Nova (BEL)...	23 pts
10. (4) R. Rainbow Int.	31 pts	20. (--) R. Europa Int'l....	21 pts

L A T E S T N E W S

Radio Atlantis Eins (RAE) is a German-based MW FR station who's programs are especially made for listeners from the so-called "Ruhrgebiet". From mid-February onwards, the station will use an 65 watts transmitter. At present, however, they use only 15 watts. Both transmitters are borrowed from Radio Skyline by the way. RAE is often on the air in the afternoon (except at the weekends) on 558 (if Caroline is off the air), 531, 567, 576 or 585 kHz. A further chance to listen to Radio Atlantis Eins is the frequency of 720 kHz, when the station hits the airwaves after close down of WDR 2 at 14.45 UTC. The staff of RAE was formerly involved with Radio Skyline and all programmes are totally live. Send your reports, comments etc. to P.O.Box 220342, 5600 Wuppertal 22, FRG.

Britain Radio International (Postbus 19074, 3501 DB Utrecht, NL or 32 Victoria Road, Salisbury, Wiltshire SP1 3NG, England) announced in its test transmission on 17th January that they also plan to transmit on every 2nd Sunday of a month, in addition to every 4th Sunday. Furthermore, BRI uses now a more powerful transmitter.

One day after the deadline of RT 115 we received the following information from the Dutch Relay Service (Postbus 81, 3450 AB Vleuten, Netherlands): "On 20th December 1987, the FRS-Holland was logged on a frequency of 7315 kHz. However, the station you heard wasn't the FRSH but it was the Dutch Relay Service (DRS). The programme which was broadcast was specially made on request of the FRSH. This was done, because FRSH wanted us to test this frequency and we were looking for a new frequency. From 09.45 till 10.00 UTC, 7433 kHz were used, from 10.00 till 10.55 UTC a frequency of 7315 kHz was used and then DRS switched back to 7433 kHz at around 11.00 UTC till 11.35 UTC when we closed down. At the moment, we have problems with the power supply. So the programmes will be broadcast in low power (15 watts) for a while till we have solved the problem".

A second letter we received from DRS those days told us that on 27th December 1987, the FRS-Holland was relayed by them (and not via Nova Belgium) on 7315 kHz. Apart from a further transmission on 7315 kHz on 03rd January 1988, the Dutch Relay Service was also testing on 9395 kHz on 10th January 1988 (any logs ??).

ANORAKS

P.O. BOX 539
BLACKPOOL FY1 4RE
England

European Christian Radio is based in Ravenna, Italy. Apart from their transmissions on SW they are also on the air on FM in their local area using the name Radio Evangelo Ravenna. ECR has increased its power on SW now. They can be received on 7355 or 7361 kHz using 5 kW. Listeners' mail should be sent to P.O.Box 500, 2345 Brunn, Austria. (please don't forget that we don't print ECR-logs in this magazine in future !)

After an absence of more than one year, Radio Nemesis International returned to the airwaves on 10th January 1988 being relayed by Radio Rainbow Int'l. The following address was announced on the air: c/o Room 53, Handsworth Hall, Priory Road, Birmingham, UK.

Radio Galaxy, Germans most powerful FR station, will hit the airwaves on Sunday, 31st January 1988 for the very first time between 07.30 and 13.00 UTC with a power of 1 kW on 6225 kHz. The programmes will start at 08.00 UTC, between 07.30-08.00 UTC (0830-0900 CET) test signals and nonstop music can be heard.

To avoid any interference with other stations on 6225 kHz, Radio Galaxy would be pleased if co-channel stations will use another frequency. Reports, etc. are highly appreciated at P.O.Box 220342, 5600 Wuppertal 22, West-Germany.

Radio Galaxy - the ultimate attack on your receiver !

The former station Radio Skyline (c/o Wuppertal) plans a comeback on SW and MW soon. Radio Skyline was already active in 1976 and if everything works alright the station will start its regular transmissions on various MW and SW frequencies on 20th March 1988. In the following 3 weeks after that comeback transmission, Radio Skyline will be on the air daily (!) with programmes of some good old DJs of stations like Gloria, Valentine and Skyline of course. Previous test transmissions of the station will consist of nonstop music, recordings of Radio Atlantis Eins or old recordings of Skyline itself.

South West Radio (not connected in any way with the German SWR) could be received on around 6570 kHz in the past weeks. The station is located in Killarney, Ireland and usually operates on 105 MHz. Contact address for South West Radio is Castle Heights, Killarney, Ireland.

In contrast to Anoraks' "Weekly Report" No. 193, we can assure you that those transmissions were not relayed by Radio 101. The latter station will change its current frequency of 7361 kHz to a frequency in the range between 7400 and 7500 kHz in the not too distant future.

From 17th January 1988 onwards, the 7423 kHz transmitter of the Scottish FR Network (Stella/W.L.R.) will move to 7416 kHz. Together with that frequency change, the following new schedule of Radio Stella Int'l is effected:

1st Sunday: 7430 kHz from 11.00-13.00 UTC (80 watts)
2nd Sunday: 7416 kHz from 09.00-12.30 UTC (150 W)
3rd Sunday: 7490 kHz from 09.00-12.00 UTC (150 W)
4th Sunday: 6318 kHz from 11.00-13.00 UTC (200 W)
5th Sunday: 7416 kHz from 09.00-12.30 UTC (150 W)

Radio Stella Int'l, W.L.R. and the SFRN can be contacted at 23 South Beechwood, Edinburgh EH12 5YR, Scotland.

Teleradio Stereo Roma (Via Carlo Evangelisti 3, 00136 Roma, Italy) seems inactive on 6012 kHz at the moment. But it is also likely that they have repaired their MW transmitter on 1503 kHz creating spurious signals on 3006, 6012 and 12024 kHz. By the way, 6012 kHz could be heard as far as Spain and Austria.

That's it for today. On the following page you will find the FR statistics 1987. Deadline for RT 117 is on 31st January 1988. Don't forget to write or to phone us in time ! Until then we wish you successful two weeks and Fight for Free Radio,

RTV

Radio Tonga Tonga (Postbus 41, 8080 AA Elburg, Netherlands) wrote us that their next transmission will take place on 07th February 1988 from 01.00-02.30 UTC on either, 1508 or 1611-1616 kHz. By the way, Radio Tonga Tonga is the new name of the former Radio Perlee.

Following the frequency change to 6271 kHz, Radio Waves Int'l (c/o B.P. 130, 92504 Rueil Cedex, France) announces a new programme format. Apart from their usual sections "Breakfast Show" presented by Peter Hills, "French Service" composed by Philippe and "RWI 60's", a new show was introduced called "RWI calling DX". That show can be heard from 11.00-11.30 UTC and includes the latest news about RWI & Relay service plus a view on the listeners mail. The DX report of the week will receive a studio-recording of the station ! At present, Radio Luce and Radio Indigo are regularly relayed by Radio Waves Int'l.

Finally today, we have a list of all the festive days in 1988. Surely it is well worth to check out the bands on those days !

Issue 117 / Vol. 5

31st January 1988

c/o P.O. Box 10 37 71, D-2600 Bremen I, West Germany.

A Sunday evening, 1810 UTC...

First of all, we have some good news regarding our SAE-Service. Following the disaster with the lost Dutch 75 ct stamps, we have now received an great amount of new ones. So, everyone who has ordered those stamps in the last weeks will find his stamps enclosed together with this issue of RADIOTELEX. And of course, all of you can order new Dutch stamps from our SAE-Service again !

Apart from British and German stamps, we have still 2 French 2.20 Fr stamps in stock (the unique opportunity to get French stamps, 0.80 DM, 18p or 75ct each; Please also state in your order if you want Dutch, British or German stamps as compensation because only one can be the first and fastest).

FR activity and conditions were quite poor in the last time resulting in a short log list for 24th January. Only 14 different stations were received on that day.

As usual, many thanks to all contributors of this issue ! Special thanks to our today's phone loggers (6 loggers from Germany, Anoraks UK from Blackpool and our first phone logger from Sweden (maybe we can really meet us in the not too distant future)) !

Radio South Sea Int'l which could be received via Radio Waves Int'l and Westside Radio Int'l in the past months, announced the following address on the air: 10 Bromyard Crescent, Paulsgrove, Portsmouth PO6 3SD, UK.

transmitting via SFRN on 6318 kHz from 10.00-12.00 UTC (by the way, we've missed them today !).

The Pirate Freaks Broadcasting Service (PFBS) plans to test on MW in the next weeks. They will transmit on a frequency between 1605 and 1625 kHz in the night from Friday to Saturday after 23.00 UTC. Listeners' mail is welcome at Postbus 41, 7700 AA Dedemsvaart, Holland.

The Satellite Broadcasting Company (PSF 220342, 5600 Wuppertal 22, FRG) informs us that they also plan to transmit via Radio Waves Int'l on 6271 kHz in future. Apart from their usual QSL card, everyone will receive a special QSL card for a reception report of those transmissions. A further transmission of SBC can be heard on 6340 kHz (via ???) this month.

Radio South Sea Int'l wrote us that they are transmitting twice a month via Radio Waves Int'l on 6271 kHz. Reception reports are highly appreciated and should be sent to 10 Bromyard Crescent, Paulsgrove, Portsmouth PO6 3SD, UK.

+++ Wanted: Single record or album of the songs "American Generation" by the Ritchie Family (1979) and "One For Me, One For You" by La Bionda (1978). State price and condition, RADIOTELEX, P.O.Box 103771, 2800 Bremen 1, FRG. ++++++

Radio Gnome

Issue 118 / Vol. 5

14th February 1988

c/o P.O. Box 10 37 71. D-2800 Bremen 1. West Germany.

A remarkable change in the history of RT....

Due to pressure from the local post office, we were forced to set up a "Gesellschaft bürgerlichen Rechts" (Company of Civic Rights) under the name of "RADIOTELEX". Otherwise all your letters would have been returned to sender with the remark "not known at this address". So, yours truly had to look for a so-called straw man, then he set up a "Gesellschaft bürgerlichen Rechts" called "RADIOTELEX" with him by making a contract. And now, RADIOTELEX is the official joint user of the post box and has a partner who has nothing to do with the magazine. Nothing else has changed !

Indeed, that is German officialdom !

Anyway, this setting up results in the following changes for you:

- 1) The correct name of RT is now "Radiotelex GbR".
- 2) If you write to us, please write the full name on the envelope. It is also not necessary any more to write "c/o" before the post box number. So, please write the following address on your envelopes: Radiotelex, P.O.Box 10 37 71, 2800 Bremen 1, West-Germany.

Oh, by the way, we only need an original capital of 100,000 DM yet, then we can set up a public limited company (Aktiengesellschaft) and you can buy our shares at the stock exchange. Do you have any interest, hi ???

O.k., before starting with the logs, we thank all contributors of this issue for their support, though we must add that we've really missed some contribution resulting in a lack of news this time.

Remember, your contribution is always welcome !!!!

L A T E S T N E W S

RADIO JOYSTICK

Funky Sounds for Central Europe

Radio Caroline (New York 11518, USA) has set up the new aerial on Saturday, 13th February. In Great Britain, the signal is much improved now, but nevertheless it is only half as good as it was with the old mast which collapsed in November '87. Caroline's frequency is of course 558 kHz. (AUK)

On 30th December 1987, Radio Delmare had to appear at the court in Antwerpen, Belgium. The operator of Delmare, Johan, was fined DM 570,-(converted into DM), which was less than everyone had expected. Johan was able to prove that he hasn't really interfered with other stations and that legal stations like HCB and BRT also used 48 mb. frequencies in the past (6205 resp. 6225 kHz). As that fine was less than expected, it is likely that Radio Delmare will return to the airwaves in the not too distant future.

Radio Diamond (P.O.Box 220342, 5600 Wuppertal 22, West-Germany) will suspend its transmissions, as the staff plans to work at a local private station (legal !) in West-Germany.

Radio Joystick (Postfach 220342, 5600 Wuppertal 22, FRG) offers two new stickers to its listeners (see illustrations), which are available for a reception report apart from all the other stuff like QSL card, info etc.

Due to personal differences with the Joystick staff, Jeff Anderson of Radio Pogo 104 will not produce any programmes for Joystick any longer. Anyway, RJOY is still on the air on every 4th Sunday from 0900-1100 UTC on 7414 kHz via the Scottish FR Network. By the way, don't forget to ask for their new info-sheet in which you can see the OP, Charlie Prince, in "action".

RADIO JOYSTICK

"Funky Sounds for Central Europe"

Charlie Prince - Post Office Box 22 03 42 D - 5600 Wuppertal 22

Radio Marabu Int'l (PSF 220342, 5600 Wuppertal 22, FRG) informs us that they will celebrate their 4th birthday in March 1988. (Congratulations from all at RT). So, the station plans to broadcast one or two special shows on various frequencies in that month. Furthermore, several prizes will be lot among all reports they receive for those transmissions until 15th April 1988. And a new QSL card will be also printed in that period. By the way, Radio Marabu is still on the air on every 2nd Sunday

Radio Nemesis International (Room No. 53, Handsworth 1, Friary Road, Birmingham B20 1NN, UK), which could be heard on 10th January 1988 broadcasting via Radio Rainbow Int'l, wrote us that they are not connected in any way with the Radio Nemesis heard about one year ago ! The transmission of January was the first transmission of the new Radio Nemesis Int'l on shortwave ! However, the station has already broadcast on FM 105-106 MHz in the North Derbyshire area of England during summer 1987. DJs at Nemesis are Richard "Force Twelve" Gale, Ian "Hot" Walters and J.R. (not the one from Dallas), and their next broadcast will be recorded at Easter this year.

Radio Scorpio (Postbus 19074, 3501 DB Utrecht) informs us that they plan to produce a special show on the occasion of their 3rd birthday on 20th March 1988 (congratulations from RT). That show can be heard from 09.00-13.00 UTC on 7430 kHz that day and will include a flash back to Scorpio's history as well as a prize competition.

Issue 119 / Vol. 5

29th February 1988

c/o P.O. Box 10 37 71, D-2800 Bremen 1, West Germany.

Hello Telex readers,

This issue of RADIOTELEX appears one day later than usual, because we have had some time troubles this weekend. But as this is the first delay since September 1987, we hope you'll apologize it. At the end of the last issue, we invited you to send us your QSL blacklists. But due to space problems we couldn't explain what we understand under such a list. So we will explain it now: In a QSL blacklist are all stations included who didn't reply to their listeners until now. You will then have a survey about Free Radio stations which hardly or never reply. And in order to draw up such a list we need your help ! If you miss a reply for a reception report sent to a station 6 months or more ago, write to us by using the following scheme: Station, frequency.....report sent on (months & year).....enclosed....., e.g. Radio XY, 6200 Jan. '87 IRC, postcard. Well, so far for our blacklist.

By the way, it is also time to remind you that any news of RT may be used in broadcasts or other magazines provided credit is given to RADIOTELEX !

As usual, many thanks to all contributors of this issue. Special thanks of course to our phone loggers (7 loggers from West-Germany and Anoraks UK from Blackpool).

U

ANORAKS

P.O. BOX 539
BLACKPOOL FY1 4RE
England

Radio Astral International is a new station which made its debut broadcast on 6280 kHz (via Westside Radio) on 21st February 1988. The following mailing address was announced on the air: 3 Rosewarne Cottages, Rosewarne Downs, Near Camborne, Cornwall TR14 0BE, England.

Radio Blond Pirate announced in its shortwave debut on 6270 kHz on 28th February 1988 that they are using 55 watts on SW and that they will be on the air more or less regularly if the listeners' response is good. Reception reports are highly appreciated at Postbus 669, 7900 AR Hoogetveen, Netherlands.

Radio Caroline (New York 11518, USA) hit the airwaves on 6210 kHz on Tuesday, 23rd February 1988 at around 10.00 UTC and is daily on the air since then. Reception is very well in the UK and on the continent (in Scandinavia maybe too).

Error Dept.: When writing RT 118, some typing errors occurred in the address of Radio Gemini. The correct address is 32 Puller Road, Boxmoor, Hemel Hempstead, Hertfordshire, UK.

A programme of Guernsey Sound could be heard via the Scottish Free Radio Network on 28th February 1988. Listeners' mail should be sent to 23 South Beechwood, Edinburgh EH12 5YR, Scotland.

Hi Free Radio enthusiasts,

As Free Radio activity was very severe in the past two weeks (especially regarding QSOs), we won't waste any space today and will just start with our logbook.

But first of all, many thanks to all contributors of this issue as well as to our regular phone callers (6 loggers from West Germany, one from Sweden and Anoraks UK from Blackpool) !

On 06th March 1988, Radio Caroline interrupted its CB-relay on 6210 kHz at 12.03 UTC in order to receive reception reports from landbased stations live on the air. They closed down for 30 minutes followed by a test transmission from a separate studio which lasts 70 minutes. Then they ceased their transmissions again for about 30 minutes.
R. Atlantis SW, R. Freedom, BFM, PFBS, W.L.R., WBN and R. Eastmoor called Caroline up and gave out their reports.
After that, Radio Caroline returned to its usual 558-relay at 1420 UTC.

Delta Radio UK told us that they are on the air on every last Sunday of a month at 11.30 UTC. At present, they are using a 12 watts rig. QSL cards are available soon and can be obtained from Box 5, Hunstanton, Norfolk PE36 5AU, England. (of course every last Saturday, not Sunday !)

Radio Nordlicht Int'l was on the air in USB mode using 7385 kHz. They announced that their next transmission will take place on 20th March 1988 at around 10.00 UTC on the same frequency. The station can be contacted at P.O.Box 6403, 2300 Kiel, West-Germany.

Steve Most of Radio Pamela wrote us that in his recent court case on 10th February 1988, Medway Magistrates fined him a total of £ 115 on five counts, only two of which were actually for operating the SW transmitter of Radio Pamela. Two charges were in fact dropped, which were for installing and using an MW transmitter. The studio equipment was ordered to be given back to Steve, who says that once it has been returned, he can get back to normal operations on 6224 kHz. Items confiscated were the SW transmitter, a 49MHz handset and two CB rigs.

Riverside Radio Int'l (P.O.Box 39, Waterford, Eire) announced in its recent transmission on 6305 kHz that they are testing a new 30 watts transmitter. Indeed, the signal could be improved resulting in a good signal in the UK.

WABC is a new Irish pirate station using 6315 and later 6310 kHz. The station also calls himself "Hot 101" and gave out the following address on the air: P.O.Box 1242, Coleraine, Co. Londonderry, Northern Ireland.

Fight For Funky Radio!

Strange conditions today with stations from the continent only audible in the UK and Scandinavia and vice versa (long skip conditions).

LATEST NEWS

The Alternative Music & Entertainment Channel (AMEC), P.O.Box 2542, 2300 Kiel 1, West Germany, informs us that their next show will be transmitted at Easter in the 48 mb. (via Radio Tutenchamun). The May show of AMEC will also contain the programme "Listeners' Digest", in which your letters will be read out.

According to Anoraks UK, the power of Radio Caroline's SW-transmitter is in the region of 5 kW at present.

On 26th March 1988, Radio 48 (Germany; don't mix it up with the British Radio 48!) could be heard for the first time on shortwave on 6287 kHz. It is likely that Radio 48 is the same station which can be heard locally in Stade (Northern Germany) on 102.1 MHz FM. Anyway, the address of Radio 48 (Germany) is P.O.Box 220342, 5600 Wuppertal 22, FRG.

For the biggest selection of free radio merchandise, incl. "Weekly Report" and medium wave frame aeralis...contact "ANORAKS U.K.", P.O. BOX 539, BLACKPOOL, FY1 4RE, ENGLAND.

Issue 122 / Vol. 5

10th April 1988

c/o P.O. Box 10 37 71, D-2600 Bremen 1, West Germany.

Salute Telex readers,

Another day comes, another day goes and so it's time again for a new issue of RADIOTELEX. We have plenty of logs and news for you today as well as our QSL blacklist, the results of the PIN Pop Poll 1987 and a special feature about Finnish Free Radio stations. As usual, we wish to thank everyone who has contributed to this issue, especially our phone loggers (7 from West-Germany, one from Sweden and Anoraks UK from Blackpool). Your support was great and so we can present you a further bumper issue of this magazine.

3 L - BLACKLIST 1988

Our QSL Blacklist contains stations that haven't replied to listeners after more than 6 months. 9 subscribers sent us their lists in the past weeks. As some stations were mentioned several times we have decided to distribute so-called "black points". Each station got one black point per mention. The more black points a station has, the less is the chance that you will receive a reply from it.

We also have to point out the possibility that a report or letter was lost on the way to the station or to the sender. That could be especially the case by some of the stations who got one black point in our list. The following stations mentioned in the blacklist below are known as quite reliable regarding QSLs:

R. Brigitte, R. East Coast Commercial, Superclan R., R. Apollo Int'l, R. Rainbow Int'l, R. Mirage, KIWI R., Alternative Vatican R. and R. Torenvalk.

In case you've missed a reply from one of those stations try it again ! Other stations often verify only reports which comply with special requirements (like comments on the programme, accepting no reception report forms (e.g. from Siebel Verlag or DX clubs) etc.). Free Radio stations are not only interested in technical details (like SINPO, receiver etc.) but in comments and some personal lines, too. The more comprehensive a report is, the better will be the reply from the station !

Black points	Station, frequency	report sent on	enclosed

The following news item is made in order to remind you that the shows of WCS 88 (World Communication Service) which could be heard at Easter on 6274 and 6320 kHz were produced by Radio Waves Int'l and will be verified with a special QSL card. The address of WCS 88/R.W.I. is B.P. 130, 92504 Rueil Cedex, France.

Radio 101 (Postfach 2, 4680 Gemmenich, Belgium) is already off the air since 24th January 1988. According to PIN magazine No. 30, the reason was the destruction of 101's aerial through heavy storms in that month. It is likely that Radio 101 will resume its transmissions only in summer 1988. A new frequency will be also used then, as 7361 kHz suffered from severe interference in the past.

We also received some new publications in the past two weeks: PIN Magazine No. 30 is a 60 pages bumper issue containing all the events of the first months in 1988 regarding commercial stations, Offshore and FR stations on FM, MW and SW as well as the results of the PIN Pop Poll 1987 (an extract of those results can be found on page 8). A sample copy can be obtained for DM 3,-/3 IRCs from Box 220342, 5600 Wuppertal 22, FRG. DPM-Newsletter No. 20 is the next arrival on our desk. Newspaper cuttings and news of all aspects on Free Radio can be found on 12 x A5 pages. Send 1 IRC/O.80 DM to Box 1130, 4154 Tönisvorst 1, FRG and ask for sample copy.

The last but one arrival this week is the 5th edition of the list "Privater Rundfunk in Deutschland". All commercial stations of Germany are listed on 16 x A4 pages, including an up-to-date list of those multitude of commercial stations in Bayern and Baden-Württemberg. One copy of that list will be yours by sending 2 IRCs/DRP to Andres Bittner, Haidbrook 21, 2000 Wedel, FRG. Finally, we received A-UK's "Weekly Report" which covers all the latest news about British and Irish FR stations as well as Offshore news. It's a must for all who are interested in the radio scene of that part of Europe. A sample copy costs 4Op/1 IRC and can be obtained from P.O.Box 539, Blackpool FY1 4RE, England. All magazines except "Weekly Report" are entirely written in German !

F I N N I S H F R - S T A T I O N S in 1988

Shortwave:

- Right Wing Radio (1) from Jyväskylä. 6225 kHz, 15 watts Sundays 09 UTC.
- Radio Meteor (2). 48 & 41 mb. 60 watts
- Radio Bristol (2). 48 mb.
- Radio Scanwood (2). 48 & 41 mb.
- Radio Midnight Sun from Jyväskylä (3). 6275 kHz. 10-20 watts, Sundays.
- Northern Tactical Radio (4) from Vekarajärvi. 7335 kHz, Tue & Thu.

Mediumwave:

- Anis Waves (4) from Koria. 1480 kHz, 10 watts, Sundays 12-13 UTC.
- Radio Red Anode (4) from Kuusankoski. 1552 kHz, 40 watts.
- Radio Rutina (4) from Kausala. 1600 kHz, Sundays 0900 UTC.
- RTA 5 (4) from Pyhäntö. 1635 kHz, Saturdays 14-15 UTC, 30 watts.

FM:

- Right Wing Radio (1) Jyväskylä 96 MHz Stereo. 300 watts.
- Radio Vox (4) Kouvola 91.3 MHz, 16-18 UTC. 7 watts.
- Havana Moon Radio (4) Kouvola 103.3 MHz
- Sound of Oototherpe (4) Kouvola 91.3 MHz Sundays 1100 UTC.
- Voice of Suburban (4) Kouvola 103.7 MHz.
- also unidentified stations in Mikkeli, Seinäjoki, Eura, Tampere and occasionally other Finnish towns.

On 3rd April 1988, Radio Blond Pirate could be heard with a further SW transmission on 6267 kHz. The programme consisted of the "Listeners Top 50", but indeed those Top 50 were only a shortened version of Radio Veronica's "Top 100 aller tijden" which were broadcast in the Netherlands on Hilversum Radio 3 two days before. Sometimes you could still hear the announcements of the Veronica-DJ in Blond Pirate's programme. By the way, Radio Blond Pirate has also increased the power of the transmitter to 120 watts. Listeners' mail is welcome at Postbus 669, 7900 AR Hoogeveen, Netherlands.

Canzoni Radio made a comeback to the airwaves on Good Friday and Easter Sunday by using 6282 kHz at the former day. On Easter Sunday, they also used 6282 kHz at first, but as there couldn't be received a signal, they changed the frequency to 6293 kHz. The programme lasted 2 hours in which they presented Golden Oldies, Heavy Metal, Black Music and Irish Folk music, 30 minutes each. Canzoni's address is still Postbus 725, 6800 AS Arnhem, Netherlands.

Radio Caroline (New York 11518, USA) returned to the airwaves on 558 kHz today (10th April) at 09.40 UTC following drifting. The station was off the air on that frequency on Easter Monday and since Friday, 08th April 1988 at 11.02 UTC. 6210 kHz is quiet since Easter Monday which was probably due to drifting, too. A detailed report about what has happened can be read in the latest issue of Anoraks UK's "Weekly Report".

Radio CLOG (Postfach 540101, 4100 Duisburg 11, FRG) told us that they haven't received any reception reports for their show via Radio Kristel Int'l on 6295 kHz on 28th February 1988, as mentioned in the log list of RT 119. Furthermore, they want to point out that they haven't sent any CLOG-programmes to Radio Kristel Int'l. It is believed that a cassette-recording of one of their programmes was sent to RKI by Radio Orion or Radio Telstar. As Radio Telstar has suspended its transmissions, Radio CLOG cannot use those relay facilities any longer. At present, they are looking for another relay station. Till they will find one they will broadcast via Radio Tutench-
amun on 6315 kHz.

Radio Delmare made a surprising return to SW, too. On 1st April 1988, a test transmission could be observed on 6241 kHz, but obviously Johan has still problems with the transmitter, because a lot of breaks could be heard. Reception was good as ever but unfortunately the modulation was also poor as ever. Radio Delmare uses still the old address: Postbus 36, 2050 Antwerpen, Belgium.

The mystery about the unidentified station on 6815 kHz mentioned in RT 121 was now solved: It was a test transmission of Radio East Coast Commercial. One day after the deadline of the last RT, a letter from ECC reached our desk telling us that the station will be broadcasting every 1st Sunday of a month on 6815 kHz from 3rd April 1988 onwards. Broadcast hours will be 10.00-13.00 UTC.

However, due to transmitter faults we could observe only a carrier on that frequency on Easter Sunday. So the programme had to be broadcast one week later, on 10th April 1988. The contact address of East Coast Commercial is P.O.Box 5, Hunstanton, Norfolk PE36 5AU, England.

We forgot to mention in the last issue of RT that Radio Electra can be now reached under the following address: 3 Rosewarne Cottages, Rosewarne Downs, Nr. Camborne, Cornwall TR14 OBE, England.

For the biggest selection of free radio merchandise, incl. "Weekly Report" and medium wave frame aerials...contact "ANORAKS U.K.", P.O. BOX 539, BLACKPOOL, FY1 4RE, ENGLAND.

+++ Deadline for RT 123 is on Sunday, 24th April 1988+++

Radio Fax is a new station hitting the airwaves for the first time on Good Friday, 1st April. The station can be heard on 6220 during daytime and on 1611 kHz during nighttime. It was announced that they are on the air to demonstrate the kind of service they will providing every day of the week from summer 1988 onwards. Furthermore, Radio Fax wants to broadcast with a license from the UK. QSL cards are available against 50p or 3 IRCs from 1 High Ash Farm, Caistor St. Edmunds, NR14 8RH, England.

The programmes of Radio Fax are quite unusual for a Free Radio station. They are including reports about the British radio scene, technical affairs like CD-Players and amplifiers as well as a relay of Radio Netherland's Media Network show. The programmes were repeated a few times in the following Easter days and so it is likely that they have used a loop tape, maybe the transmitter is remote. Anoraks UK presumes that Radio Fax was obviously an April fool! And they remind us to the Capital Radio relay several years ago. That went on for several days and the source of that one was also a mystery. We agree with A-UK that Radio Fax is indeed rather odd.

FMTR and Star International wrote us that their address has changed since April 1988. The new address is: 231 Loose Road, Maidstone, Kent ME15 7DR, UK.

Programmes being relayed for the above stations may give the old P.O. Box SH9 Sheerness address. But listeners wishing to write are advised to use the new address to ensure a prompt reply.

According to Radio East Coast Commercial, the Free Radio Service Holland uses a second mailing address now: Postbus 36, 2050 Antwerpen, Belgium. The well-known Postbus 41, 7700 AA Dedemsvaart address is still in use of course.

Globe Radio Milan is a new project which plan to establish an Italian radio relay service. So here is an extract of their info-sheet: "Globe Radio International would like to help you filling the gap in your coverage of Europe by constructing a 5,000 watts SW facility near Milan, Italy. Provided there is enough interest and commitment, it could be "on-line" before summer 1988. This technically sound, well-engineered service is designed to deliver a competitive signal to the densest parts of the European continent at rates you can afford." For further information write to IRRS-GRM, Via Teodosio 27, 20131 Milano, MI, Italy or to the FRS-Holland address. By the way, FRS-Holland presumes that IRRS-GRM is in some way connected with Radio Milano International.

Radio New Wave (Postbus 536, 7900 AM Hoogeveen) announced that their next transmission will take place on 24th April 1988.

A letter sent to the address of Radio Nordlicht Int'l was returned with the remark "P.O.Box is not known"! Maybe this station is a hoax by some hams resp. radio amateurs, hence the use of the USB mode.

Radio Stella Int'l announced in its recent programme that they will transmit on 7475 kHz instead of 7490 kHz on 17th April 1988. Contact address of RSI is 23 South Beechwood, Edinburgh EH12 5YR, Scotland.

Rainbow Radio Germany is on the air via Radio Waves Int'l on 6271 kHz on every 1st and 2nd Sunday of a month. RRG also has a new address for listeners' mail: Postbus 65027, 3002 Rotterdam, Netherlands.

Radio Telstar (Postbus 59, 7260 AB Ruurlo, Netherlands) has sold its powerful transmitter. So this hard to reply station will be obviously silent in the next time.

That's the end of our today's logbook. Many thanks to all contributors, especially to those who phoned in today (6 from West-Germany, one from Sweden and Anoraks UK from Blackpool). And the end of our logbook is also the end of this RT issue, a 5 pages issue this time (quite rarely). Deadline for RT 124 is on Sunday, 08th May 1988. Please write or phone us in time. We wish you all the best in the next two weeks,

Good luck,

Issue 123 / Vol. 5

24th April 1988

c/o P.O. Box 10 37 71. D-2800 Bremen 1. West Germany.

Dear Free Radio listeners,

We have great news for you today. Due to a joint venture with CPL (Current Pirate List) from Sweden, we are now able to offer you a Free Radio address list. This list contains on 4 pages the addresses of all active FR stations on MW and SW in alphabetical order and will be enclosed to RADIOTELEX every month. But as this list would cause additional printing costs of about DM 200,- per year, we have only 3 possibilities to finance it:

- 1) we can increase the subscription rates by DM 3,-/£ 1/USD 2/2 IRCs etc. per year, or
- 2) we can send that list for the above subscription rates only to those who are interested in, or
- 3) we can finance it by the charity of some DXers (which seems most unlikely).

At present, we don't know what to do and so we ask you to write us which of those 3 possibilities do you prefer or whether there is someone who can regularly copy that list free of charge.

Please write us within the next two weeks because we plan to enclose that address list for the first time to RT 124.

By the way, the log of the Antarctica Broadcasting Serv. on 1st April, which we printed in RT 122, was of course our April Fool ! Such a station has never been in existence and will not exist in future, too. Due to the fact that we have less time than usual today, we have to write a part of RT some hours before the deadline. So, we will start with the

L A T E S T N E W S

It's always fine to see that RT is read carefully by several FR stations. As mentioned in RT 122, we had sent a copy of that issue to Weekend Music Radio which was declared to the "blacklist station of the year" by us. In the meantime, we received the following letter from the owner of the 42 Arran Close address which WMR uses. He asked us to print his letter in RT and so we do it herewith:

"I have just received issue 122 of your publication, which I have quickly forwarded-on to my friend Jack Russell in Scotland, the owner/operator of the long-running SW FR station "Weekend Music Radio". Since my associates and I closed-down the leading SW FR station of the mid-seventies "ABC England" (closed May, 1977), I have allowed this Cambridge mail address/my address, to be used by only one (1) FR station - "WMR". I have always forwarded-on the "WMR" mail quickly. Over the years there have been many reception reports, many letters of compliments and very few letters of complaint. Therefore, I am very surprised to discover "WMR" topping your "QSL blacklist 1988" as "the Radiotelex Blacklist Station of the year" ! Surely to place "WMR" or any other station, at the top of your QSL blacklist, as the result of your receiving only six (6) complaints/votes/black points, is crazy, unfair and totally ridiculous ?! Six complainers from the hundreds of reception-reporters who write to "WMR" each year, is a very small percentage !! I'm sure Jack Russell will be investigating any 'problems' and reporting back to you as soon as possible. In the meantime, perhaps you will print this letter in RT, to prove to listeners/readers that all "WMR" mail

received at Cambridge does get forwarded-on to the station quickly."

RT-statement:

"Of course, we don't doubt that you forward-on all WMR mail you receive to the station, but obviously Jack Russell of WMR is not fond of replying them. But we admit that it was quite hard to call a station "blacklist station of the year" and so we want to apologize us.

There were the following points which had confirmed our declaration:

- 1) In fact, we got blacklists from 9 DXers. Six (6) of them mentioned WMR in their list which means a total of 67%. And we don't know whether the other 3 DXers have ever written to WMR or not. In our view, 67% is everything else than a very small percentage.
- 2) We have already sent 3 reception reports to WMR in the past two years (the last one in summer 1987), not by using the RT address but by using our private address, and didn't received any reply from the station until now !
- 3) WMR was also mentioned in previous RT black lists and also didn't appear in our QSL survey for a very long time.
- 4) It has already got around that WMR hardly or never replies to reception reports and other DX magazines had mentioned that fact in their issues, too."

Anyway, we will be curious about the letter from Jack Russell and will keep our readers informed about this discussion. And we can assure you that we would be glad if we can report in one of the next issues that WMR will verify all correct reports.

Radio Blond Pirate (Postbus 669, 7900 AR Hoogeveen, Holland) told us that they are now transmitting with a power of 185 watts. The station also want to point out that not the whole Top 50, which were aired on 3rd April, were taped from Hilversum 3 Veronica, but only the songs they haven't in their own record collection.

Radio Caroline (New York 11518. USA) returned to SW 6215 kHz on 11th April 1988. Due to several SSB transmissions by ship-shore operators on that frequency, they changed to 6205 kHz at Thursday's evening (14th April). On 15th April, the station was off the air on 6205 kHz until late in the evening when they recommenced SW transmissions once again. 6205 kHz, however, is a quite unfavourable frequency, as HCJB Quito also uses that frequency early in the morning. By the way, our RT New Zealand monitor could receive Radio Caroline on 6210 kHz on 14th March 1988 (0611 UTC) in New Zealand which was a distance of about 22,000 km.

Radio East Coast Commercial (P.O.Box 5, Hunstanton, Norfolk PE36 5AU, England) asks us to publish the winner's name and the correct answers to the questions of the EOC competition posed by Norman Nelson in February/March 1988. So, here they are:

- 1) Which current SW FR station often calls itself the Big "O" ?
Answer: Radio Orion
- 2) What is the name of the former Radio Caroline SW presenter that made a special programme for one of Britain Radio Int'l's Christmas/New Year broadcasts ?
Answer: Freddie Archer
- 3) Rebel Radio Network was aired under the call-signs Osaka 1 and Osaka 2. What are the names of the two imaginary radio ships associated with these broadcasts ?

Answer: Osaka 1 came from MV Ocean Myth; Osaka 2 came from MV Fuji Oil. Congratulations to Bradley Allen from Kent who has won a copy of the World Radio TV Handbook 1988.

According to Radio Nederland's "Media Network" programme, Radio Fax (1 High Ash Farm, Caistor St. Edmunds, NR14 8RH, England) was operating with 230 watts. The operators were a group who had applied to run a technical radio station two years ago, but no response had yet been received by the authorities. Basically, this was a broadcast to test

the response of such a service and obviously no April Fool.

Freesound Radio International could be observed quite often on 6233 and 6266 kHz in the last time. The station uses a 20 watts transmitter and can be contacted under the following address: 32 Victoria Road, Salisbury, Wiltshire SP1 3NG, England.

The Free Radio Service Holland (Postbus 41, 7700 AA Dedemsvaart, Holland) wrote us the following news as a reaction on RT 122:

- 1) The info which East Coast Commercial read out in its DX programme is not correct. Sending the FRS magazine "FRS goes DX" from Belgium has certain advantages. But it also means that FRS is obliged to put a Belgian address on the envelope. And that's the Delmare address. Keep in mind: The Belgian address only is on the envelope for the purpose of "FRS goes DX". All listeners mail should be sent to the Dedemsvaart address.
- 2) FRS has no connection with Globe Radio Milan. For further info regarding that new project people are supposed to write to the Italian address only and not to the Dedemsvaart address.
- 3) Since 17th April 1988, FRS-Holland has recommenced its transmissions on SW including musical shows with Danny Kay, Mark Stafford, Joop ter Zee and Peter Verbruggen as well as the DX show and the I.L.L.S. with Peter and Gerd. A full line-up of programmes will be introduced in May or June.

The Indian Ocean Broadcasting Service has just replied to the reception reports received for their 1st transmission. All in all they received 25 reception reports. IOBS will verify all reports 100% and if there is anyone who didn't received his QSL card, he is supposed to write again. The next show of IOBS in Europe is expected to take place in May (via Tutenchamun) and in that show they will also announce the lucky winner of the quiz. Stickers will be printed in that month, too. IOBS still uses the RT-address.

Here is a survey about Italian private stations being active at present: Teleradio Stereo is transmitting with 1 kW on 6012 kHz and the 2nd harmonic on 12024 kHz. Contact address is Via Carlo Evangelisti, 00136 Roma, Italy.

European Christian Radio is on the air from 06.55-13.00 UTC on 7361 kHz by using the following address: EFG, Postfach 500, 2345 Brunn, Austria. By the way, one monitor could observe that station on 7295 kHz today. Very interesting, isn't it ?!

The last one in our survey is Radio Calabria Int'l which can be heard on 7770 kHz from 12.00-13.30, 15.00-16.00 and 20.00-21.30 UTC. The power is said to be 200 watts. According to our Italian monitor, however, they seem to be on the air on SW only once a month. The station uses the following address: Via P. Sarpi 23, 89042 Gioiosa Jonica (RC), Italy. Radio Spoleto, Radio Milano Int'l and Radio Nuova Musica are inactive on SW at present.

Radio Milano Int'l informs us that the carrier on 7295 kHz was not the one of their SW transmitter. At present, they have no plans to resume the SW service. RMI is expanding its station's relay on FM in all parts of Italy instead.

It is said that the 7295 kHz carrier was caused by BBC London, as they have also been tested on that frequency some years ago. It is also likely that it was caused by European Christian Radio, isn't it ?!

Radio Nordlicht International (Northlight in English) is not a hoax, as we mentioned in RT 122. In a letter, they told us that the station had its very first transmission on FM 101 MHz already 3 years ago by using a 2 watts transmitter. 15 months later, they were raided by the German GPO. Some time later, they've made some test transmissions on 105.6 MHz FM and 6553 kHz SW. In 1987, they had also planned to transmit regularly via Radio Delmare but due to the Delmare raid that plans didn't become

6215 R. Caroline 558 1215-1255 E 7700 AA DEDEMSVAART HOLLAND - 5 -

Your Alternative SW Radio:
PFBS RADIO
POSTBUS 41
7700 AA DEDEMSVAART
HOLLAND

Radio Caroline 558 has again changed its frequency to 6215 kHz. On 30th April, the station could be heard for the last time on that frequency, because since 01st May 1988, 05.00 UTC, World Mission Radio uses Caroline's SW outlet for its programmes. These programmes have been expected for a long time and the Caroline programmes were only relayed for test purposes on SW (unfortunately). So, if you want to listen to Caroline itself, you may only listen to 558 kHz. World Mission Radio can be contacted under the following address: P.O.Box 3416, Corona, California 91719, USA. By the way, the Dutch programmes of WMR are presented by Johann Maasbach (e.g. from 1000-1030 UTC, 1500-1530 UTC etc.).

Kenny King, OP of Cruisin' Solid Gold Radio, informs us that he will also present shows for W.L.R. and Radio Stella Int'l apart from his own transmissions. Each 3rd Sunday, his programme can be received on Radio Stella Int'l from 09.00-10.30 UTC and on each 4th Sunday on W.L.R. from 12.00 - 12.45 UTC.

Radio DJ is a new French station which hit the airwaves for the first time on 8th May via Radio Waves Int'l and Radio Luce. The station will also broadcast once or twice a month by using its own transmitter. It is run on 6265 kHz with about 20 watts. Radio DJ uses the following address: c/o B.P. 130, 92504 Rueil-Malmaison Cedex, France. It is likely that Radio DJ will also relay programmes of Radio Luce and Radio Waves Int'l.

Radio East Coast Commercial announced in its recent transmission that no DX programmes will be presented for the time being as Neal West was taken into intensive care with stomach problems. Best wishes for a speedy recovery from all at RT !

Radio Frisco which can be heard on MW 180 metres uses the following address: Familie Klos, Zwarteweg 101, 8097 PT Oosterwolde, Netherlands. The OP Aalt wrote us that he uses 800 to 1000 watts and he is active in Free Radio since 1958 (!). He also managed a camping site in Oldebroek - Gelderland and "invites" every listener to make holidays there. By the way, his son is also known under the name of Radio Turbojager.

Radio Rainbow Int'l changed its frequency to 6231 kHz on 1st May 1988 and announced the following schedule:
10.00-11.00 UTC: Guernsey Sound (weekly)
11.00-12.00 UTC: W.L.R. (weekly)
12.00-13.00 UTC: Cruisin' Solid Gold Radio (twice a month)

Starfleet Radio will still make some test transmissions within the next weeks. From 12th June 1988 onwards, they plan to be on the air on each Sunday.

On 1st May, Radio Tonair was on the air on 6220 kHz announcing that they are using a new rig with 2 kW (!??). The next transmission of Tonair will take place on 6220 kHz as well as in parallel to 7423 kHz.

Issue 124 / Vol. 5

08th May 1988

c/o P.O. Box 10 37 71. D-2600 Bremen I. West Germany.

Hi Telex readers,

We are sorry that the last issue of RT was a little bit confusing regarding CPL (Current Pirate List). One day after the deadline of RT 123 and just before mailing it off, we received CPL and decided to enclose it yet in order to guarantee an up-to-date list.

By the way, that was a publicity campaign by CPL itself. The CPL we will regularly enclose to RT in future is called "RT Address List" and will only include the 4 pages of addresses (no logs !).

Thanks to the charity of some very kind readers, we are now able to enclose that address list to our subscribers once a month free of charge ! Isn't it fantastic ?!?!

The first resp. second edition will be enclosed to RT 125.

We wish to thank also everyone who rang in today (5 from Germany and one from Sweden). Unfortunately, we didn't receive a phone call from Anoraks UK today, so they are no logs from that part of Europe for 8th May. But we will certainly present you those missing logs in an updater in RT 125 !

L A T E S T N E W S

Due to technical works at their transmitter, Radio Aquarius International will take a summer break until the 1st Sunday in September 1988. The same shall also apply for Radio Caldonia International which can still be heard on 15th May 1988 before the summer break will be taken.

Radio Blond Pirate also announced that their next transmission shall take place on 15th May and will include solely golden oldies. After that broadcast, the station is going to take a long summer break in order to return some time in August or September this year. The reason for that summer break is the removal of the OP.

Canzoni Radio wrote us that they are using the following new address: Postbus 19074, 3501 DB Utrecht, Netherlands.

The next transmission of Canzoni will take place as soon as the listeners' mail for their Easter transmissions were received.

All addresses not mentioned in this issue can be found in CPL 12 which was enclosed to RT 123.

Deadline for RT 125 is on Whitmonday (Monday!), 23rd May 1988.

LATEST NEWS

Radio Caroline 558 can be heard on 819 kHz in parallel to 558 kHz since Saturday night (21st May). 819 kHz will be used for the Dutch service Radio Nordzee 819 when the tests will be finished in June 1988.

Radio DJ could be already heard on 01st May 1988 (see logs) via Radio Luce. They had also tested with their own transmitter before. The schedule of Radio DJ is as follows:

- one week with their own transmitter on 6265 kHz + relay of Luce and Waves on 6265 kHz,
 - the following week, this DJ programme is repeated on 7375 kHz via Radio Luce from 0800-0900 UTC.
 - the following week, new programme on 6265 kHz etc. etc. (see above)
- Concrete broadcasting details about their programmes via Waves are not known at present.

4IFR is looking for a second FR station which is able to relay their programmes regularly. Furthermore, 4IFR plans to present the "4IFR - New Zealand Story" soon in one of their shows. At present, 4IFR is on the air bi-monthly via Westside Radio Int'l on 6280 kHz.

Radio Luce is jammed by an East-German "spy station" on 7375 kHz from 09.00 UTC onwards. Apart from playing only French songs in their programmes, they have also introduced shows with classical music now.

Radio Marabu Int'l has now finished its special programmes on the occasion of its 4th birthday. Despite being good conditions and signal strengths, they received only 17 reception reports for 10 transmissions in the 48 m.b. (in comparison: Radio Galaxy received 87 reports for one transmission in April!).

Radio Marabu also announces two new DJs: Kees Snijders who presents the Dutch service and Thierry Nollet who will present the French service from June onwards. Thierry Nollet usually works at the local university station Radio Campus from Brussels. His show is called "Contrastes" and it is also broadcast on Radio Campus as well as several French and Canadian stations in addition to Radio Marabu.

Of course, both Marabu shows will contain much Independent music. The next transmissions of Marabu will take place on 6318 kHz on 12th June, 10th July and 14th August 1988 from 09.00-11.00 UTC in each case. In addition, Radio Marabu Int'l plans a further show via Radio Atlantis SW in summer this year.

Radio Waves Int'l has transmitted on 6338 kHz instead of 6271 kHz in the past two weeks. But this frequency suffers from interference caused by a career. Apart from 6338 kHz, R.W.I. has also crystals for 6271, 6320, 6375 and 7475 kHz.

In the past two weeks, we received more and more letters telling us that the reception reports sent to Radio Nordlicht Int'l were returned to sender with the remark "P.O.Box number (!) is not known at this address". This is really a mystery, because there were also some listeners who received a reply from the station in the past weeks, hence our small report about that station in RT 123.

AMEC, which also uses a P.O.Box in Kiel, told us they understand that Radio Nordlicht's P.O.Box is located in Kiel-Gaarden. So, maybe it's advisable to write 2300 Kiel-Gaarden on the envelope ??!

And that concludes another episode in the life of Free Radio. As we still have some space (but not enough for a QSL survey; RT 126 will contain a large QSL survey), we just want to tell you that everyone in Bremen honours SV Werder Bremen who is German Football Champion 1988 (resp. soccer for our American readers). It's the first time since 1965! Oh, by the way, the election of Miss Universe (not the one of Radio Universum, hi) 1988 also takes place in Taiwan today. Should we inform you about the lucky winner in RT 126 ??? But remember, RT is a Free Radio magazine and nothing else. Along these lines, bye beye for now, RT

radiotelex

Issue 125 / Vol. 5

23rd May 1988

c/o P.O. Box 10 37 71. D-2600 Bremen I. West Germany.

Due to various reasons, our P.O.Box is now open for the use by FR stations. So, if you run a FR station and if you're looking for an address in West-Germany, don't hesitate to write to us and ask for further details.

As usual, we wish to thank everyone who has contributed to this issue of RT, especially those who rang in today (6 from Germany and one from Sweden). We got no phone call from Anoraks UK this time, as RT and WR were published on different days. So, there are no logs from the UK for Whitsun. But we hope the co-operation between both magazines will continue from the next issue onwards. So, keep in mind, deadline for RT 126 is on Sunday, 05th June 1988.

Issue 126 / Vol. 5

05th June 1988

c/o P.O. Box 10 37 71, D-2800 Bremen I, West Germany.

Seven tears are fallen onto the typewriter....

We have two kind of news for you today. First of all the bad news: This is the last issue of RT made by the Bremen staff, as we have no time any more to issue RT on a regular basis. But we promised two kind of news for today and so we have also some good news for you, because RADIOTELEX is still alive (and kicking) ! The former staff from Duisburg will take over our job again. They've already issued this magazine from January 1986 to June 1987 and they had done their work very well in that period. So, please pay attention to the new address of RADIOTELEX which is an old one in reality:

R.T., Duempter Strasse 6, 4100 Duisburg 12, West-Germany.

Send your contribution only to that address from now onwards ! Deadline for RT is still on Sundays and all of you who rang in in the past are supposed to do it in future, too. Many thanks in advance ! The Bremen address is still in existence and will be used for all matters regarding the SAE-Service, Tape-Service and the Address-Service (RT drop box). Keep in mind, contribution to RT should be only sent to the Duisburg address !!!! Please use the Bremen address only if you want stamps, tape-recordings or if you want to write to a station using this address.

The RT headquarters is only in Duisburg from now onwards !!!!!!!

As usual, many thanks to all contributors of this issue. Special thanks also to our today's phone loggers (5 from Germany, one from Sweden and Anoraks UK from Blackpool). Last but not least, we will also answer the question of some readers regarding the election of Miss Universe 1988 mentioned in RT 125 due to lack of FR news (though it has nothing to do with Free Radio). The beautiful winner was Miss Thailand: Pornpip Nakhirunkanok (what a name !). And after that long introduction we continue with our popular....

Starfleet Radio Int'l plans to increase the power of its transmitter to 40 watts. Test transmissions are expected to start soon. Then the station will be taken a break for some months as the operator has lost his driving license and SRI only wants to transmit mobile (Trink, trink, Bruderlein trink). (PIN)

Radio Tonair Int'l and Radio Torenvalk hit the airwaves today (5th June) by using the name Radio Free Europe. So, don't mix it up with the American RFE, because the aims of both stations are different ones (or maybe not !?).

On 5th June 1988, Towor Radio could be received on 6298.5 and 6815 kHz by using SSB mode. The programmes of Towor Radio are different from the usual Dutch programmes and the station sounds more like an English one than a Dutch one ! The following address was announced on the air: Postbus 81, 3450 AB Vleuten, Netherlands.

+++ For sale: 25 watts transmitter. Ready to operate on 48 or 60 metres. Transmitter will be sent out with antenna and coaxial cable. Price: DM 349.95 plus postage & packing. If interested, write to RT, Adv 126, P.O.Box 103771, 2800 Bremen 1, ++++++ West-Germany.

After all these news, we are now coming to the biggest QSL survey ever:

Your Alternative SW Radio:

PFBS RADIO
POSTBUS 41
7700 AA DEDEMSVAART
HOLLAND

ctd. from page 3....

broadcasting a loop-tape message. This leaves just one option for Radio Pamela Int'l....MOVE OFF 6815 kHz.

Radio ECC apologizes to all its regular listeners for the present poor reception quality and we stress that this situation is not our making. We have written to Radio Pamela Int'l explaining the correct historical facts but it appears that the operator of that station has buried his head in the sand. The current problems on 6815 kHz lie completely with Radio Pamela Int'l due to the totally anti-social, irresponsible and unco-operative attitude adopted by the operator."

So far for Radio East Coast Commercial's letter. As you can see in the logbook of this issue, a further station, Towor Radio, has made use of 6815 kHz. We are curious about what's going on.

The Free Radio Service Holland gives us the information that the next transmission of the station can be heard on 6205 kHz on 19th June 1988 from 07.54 to 11.00 UTC. By the way, the station wants to point out that their programmes are not relayed via Radio Tonair Int'l.

According to Anoraks UK, Guernsey Sound will be taking a break for a few weeks on 6230 kHz whilst transmitter operator, Heady Eddie, in Ireland, takes his holidays. The MW outlet is also off air at present, although this is due to re-siting. There will be therefore no programmes from Guernsey Sound, via Rainbow, until 19th June. They will be heard on the 4th Sunday of the month, as usual, on 7446 kHz. It was understand that a similar break will also occur with W.L.R., but this station could be still heard on that frequency (6230 kHz) until today.

Radio Nordzee 819 which is expected to start transmissions soon on 819 kHz is said to use the following address: Playa de Aro, Box 146, Province Gerona, Spain.

We also received a letter with the latest news about Right Wing Radio which we also want to print in full length:

"The raid of Right Wing Radio: Finnish Free Radio RWR started stereo transmissions with 300 W ERP on FM 96 MHz on 08 April 1988. The publicity RWR got was enormous: RWR hit the national TV news twice, local radio news also twice and stories and news were publicised in at least 7 national and local newspapers. Unfortunately, RWR was raided on 22 April 1988 at 23.35 Finnish time when transmitting on FM. All 3 men were able to escape from the transmitting place, but 2 of them were arrested during the night. The main operator managed to get safely home after four hours and 12 km running thru the forrests with police on his trails. There were 8 (!) PTL cars searching for RWR boys and a reward was promised to the ones who'll catch them. RWR case will be in trial in Helsinki later this year. The reason for the raid was one local DX listener (not the enormous publicity ??? -ed) and "FR enthusiast", who gave information about the RWR operator to the police and PTL. We are not giving his name, but he is the operator of Radio Midnight Sun which is a station without any transmitters. We just wonder how this kind of idiot claims he is some kind of FR enthusiast ?! Please, write to Radio Midnight Sun (Utrecht address) and tell him to f... (censored, -ed) off. If you want to help RWR to pay their fines, please buy RWR goodies: T-Shirts, photos, recordings and transmitters. More information from RWR, c/o Wuppertal address. RWR might continue to fight for Free Radio by broadcasting programmes via relay stations."

RWR also told us that an association for Finnish Free Radio enthusiasts has been founded in Finland. The association is called Free Radio Campaign Finland and will work for Free Radio by selling FR goodies and transmitters as well as helping new stations to be on the air and giving stations a chance to co-operation. The contact address is FRC-Finland, Box 82, 40101 Jyväskylä, Finland.

Guernsey Sound 4th Sunday 08.00-12.00 7446kHz
plus every week 10.00-11.00 on
6318kHz.

FMTR/R.Star 2nd Sunday 10.00-12.00 6310kHz /
4th Sunday 08.00-10.00 6318kHz.

Radio Marabu Int'l 4th Sunday 08.00-10.00 6318kHz. English
2nd Sunday 08.00-10.00 6318kHz / 4th Sunday 08.00 -
10.00 6310kHz.

Radio Scorpio 3rd Sunday 08.00-12.00 7446kHz.

Radio Marabu told us that they have only booked airtime on the 6310-service and have no idea why an additional relay on 6318kHz appears in the schedule. June 12th saw the last German show on Radio Stella for the time being as Jeff Anderson who hosted the programme has stopped recording shows for the station due to lack of response. He will continue with his own station, Radio Pogo 104, in future though.

Radio Sunshine plans to hit the airwaves for the first time on June 26th, 1988 on 6325 kHz between 0900 and 1100 UTC playing "Californian music". The transmitter is said to be located in France, in the Alpes mountains, 2,000 mts above sea level. A 100-watt-tx will be used along with an old military dipole aerial. The station's staff consists of Bernard, André and Pierre. No mailing address is known for that one yet.

Slightly out of alphabetical order, Süd-West-Radio is going to publish an info-booklet covering the complete story of the station's past and present. Further photo-QSL-cards are to be issued, too, and these can be inserted in that booklet; details on that will be announced soon. Apart from that, S.W.R. has altered its programme schedule in response to its listeners' suggestions. The new line-up of shows looks like this :

30mins pop music (US hits etc.), Charly Rafferty / 30mins "Powerline" (rock & pop songs), Jimmy Wayne & Mike O'Brian / 30mins "International Oldie Show" (oldies selected from a particular year), Charly Rafferty / 30mins "Crème Fraîche" (hits from France), Pierre Desgranges / 60mins mailbag programme hosted by Charly Rafferty.

Tower 41, Postbus 81, 3450 AB Vleuten, Netherlands (ex-Gamma Radio/1986, ex-Dutch Relay Service, 1987) has written in to apologize for the "jamming" caused to a recent broadcast of R. East Coast Commercial on 6815 kHz. This dreadful thing happened because RECC's signal came in very weak indeed on the op's receiver, so he didn't think his signal would cause any trouble to East Coast Commercial. "Tower", by the way, is the only correct spelling of the station's name, even though a different version (Tower) was announced on the air. The station is going to put out future broadcasts on 41 metres, probably 7315 kHz.

WABC from Garvagh (Eire) is currently only audible locally on FM, both medium and short wave transmitters (6290/6300KHz have been used earlier this year) are off the air. New valves are awaited, the AM/SW services should be resumed soon. A new address has been mentioned which is The Lodge, The Manor House, Greencastle, Co. Donegal, Republic of Ireland.

Issue 127 / Vol. 5

June 20th, 1988

c/o Duempler Strasse 6, D-4100 Duisburg, West Germany.

Dear Telex readers,

welcome to a new phase in the life of this free radio magazine with another change in the editorial staff. You may wonder how these changes will effect you, the reader. Well, the answer is, not at all. We will continue to publish a fortnightly newsletter covering shortwave pirate radio and a little more even if space permits. Thank you very much to the old editor who has now retired from his rather exhausting job and is now going on a long vacation, after 25 issues of RT he has certainly deserved it ! Last time we forgot to mention the deadline for this issue but apparently everybody's got it right again. RT 128's deadline, however, will be on July 3rd, 1988. You are more than welcome to send in your contribution or phone us on that Sunday between 1200 and 1600 UTC. By the way, thanks a lot to all of you who just did that (5 DXers from Germany, one from Sweden plus Anoraks UK from Blackpool).

You may have noted that we have cut down on the info devoted to QSOs on 48 metres in order to save space for other news items. Besides, we do not want to encourage stations to spend a whole Sunday morning calling cq by printing every log of those QSOs in greater detail than we do at present.

NEWSDESK

Flying Dutchman Radio which has been heard almost every Sunday in recent weeks announces the following mailing address: c/o Postbus 238, 7000 AB Doetinchem, Holland. It seems to be rather certain that this station is not connected to another one using the same name which appeared in early 1985 on 48 metres.

During last Sunday's broadcast, FRS-Holland mentioned that there will be no transmission in July this year. However, FRSH will return on August 28th to celebrate its 8th anniversary with a special broadcast, details on this should be advertised ahead of the proposed date.

Radio Nordlicht (Northern lights) won't be active during June as well as July 1988. The station's operators are dissatisfied with reception results on 41 metres so far and have decided to construct a 10-watt-tx. Future transmissions will be on 48 metres in the AM mode, in the past only SSB was used as the rig the station had available was originally designed for ham purposes. Anyway, listen out for broadcasts on 6235 and 6315kHz, 6555kHz might be used, too. Furthermore, evening broadcasts shall take place on 75 metres some time next year. RNL plans to resume FM-broadcasts on FM 105.5 MHz with a new 30-watt-tx. The station has been raided once before when active on FM, the tx equipment was seized and a relatively low fine imposed on the op. The station's correct mailing address reads as follows: c/o Postfach 6403, D-2300 Kiel 14, West Germany.

According to Anoraks UK, Radio Orion have a new address of PO Box 1280, Rednall, Birmingham B45 8SQ, England.

The Scottish Free Radio Network's transmitter on 6318kHz is said to have "burnt out" several weeks ago which is the reason why no signals of SFRN were heard there lately. Meanwhile, the 7490-rig has moved down to 6310 kHz with regular broadcasts every Sunday. Radio Rainbow Int'l which appears to be fully integrated in the network by now has changed its frequency from 6231 to 6318 kHz, in fact it was logged there last Sunday. We have received the following broadcasting schedule of all relays that are presently carried out over the Scottish Free Radio Network from Eire:

Radio Stella 1st Sunday 08.00-10.00 6310 kHz / 2nd Sunday 08.00-12.00 7446 kHz / 3rd Sunday 08.00-10.00 6310 kHz / 4th Sunday 10.00-12.00 6310 kHz / 5th Sunday 08.00-12.00 6310 & 7446

W.L.R. 1st Sunday 08.00-12.00 7446kHz / 3rd & 5th Sunday 08.00-10.00 6318kHz / every Sunday 11.00-12.00 6318kHz.

Cruisin' Solid Gold 1st Sunday 08.00-10.00 6318kHz / 2nd Sunday 08.00-10.00 6310kHz / 3rd Sunday 10.00-12.00 6310kHz.

Rainbow Radio Germany told us that the station will concentrate on FM-broadcasting after getting tired of many listeners just sending in a brief reception report in order to get hold of a QSL. Nevertheless, RRG's FM programmes will be relayed on shortwave, hopefully on a regular basis once a month. The first 90-minute-relay should have taken place on July 3rd on 6295kHz - any logs? There will, however, be no QSLs issued for these broadcasts though listeners response is welcome. Rainbow R.Germany in co-operation with Starfleet Radio publish a monthly info-bulletin called "Free Radio Disaster" (the title says it all...). Right now, you may subscribe to FRD for the rest of the year (5 issues promised) by sending 5,-DM to c/o Box 65027, 3002 DA Rotterdam, Holland.

Still in Germany, Radio Skyline mentioned that further broadcasts will take place in July or August 1988. During March and April the station already tested its equipment on 6240 and 6295 kHz using 240 watts of power, over the Easter weekend a 350-watt-tx on loan from a Dutch colleague station was in use. Apart from that, tests on 1610 kHz with 65 watts and on 7500/9000 kHz with 25 watts are said to have taken place at that time.

Starfleet Radio have announced that a new 4-hour-schedule shall be in operation beginning in August (on a weekly basis?). The DJ line-up is as follows: 0800-0900 Jonathan Dee, 0900-1000 Norman Walker, 1000-1100 Stefan Kramer, 1100-1200 Jumpin' Jack Flash. Besides, Starfleet may pop up in July to celebrate the station's 3rd anniversary on the air.

As a follow-up to the item in RT 127, Sunshine Radio from France wrote in with this information: The station hit the airwaves for the first time as promised on June 26th, the frequency used then was 6875 kHz with 20 watts of power between 0900 and 1100 UTC. QSLs & info-sheets are available from the following mailing address: c/o 58 Rue Victor Hugo, 31800 Saint Gaudens, France. The next broadcast should be in early September, again on 6875 kHz but with increased power of some 40-60 watts.

Jack Russell's Weekend Music Radio has been in the news again as WMR's worked through its backlog of reception reports of late and sent out QSLs to everyone whose report actually reached the station. WMR would like to point out that all reports definitely receive a reply "even if it takes years"!! In the meantime, tests on higher frequency bands are lined up for the not too distant future, check out 26 & 19 metres for WMR on odd Saturdays and Sundays.

The final station news item deals with Wonderful Free Radio London who announced test broadcasts on a number of high frequency bands (seems to become popular these days), e.g. WONDERFUL FREE RADIO LONDON 31, 25, 19 & 16 metres. However, WFRL missed its regular 2nd Sunday broadcast last month but was logged with tests on 7385kHz since. Robin Ross has joined the station to present a regular DX-programme from now on. After all, WFRL is said to become "very big", hopefully it will.

Our friends of the "Current Pirate List" inform us that the mag has been split into a pure address list (the one you'll find enclosed with this issue) as well as a news & logs bulletin. You may subscribe to CPL direct from their Swedish headquarters by writing to CPL, c/o Apelvågen 13, 33017 Rydaholm, Sweden. Ask for a sample issue and all the details.

Before it is all over once again, please note that deadline for RT 129 will be July 17th, 1988. Of course, you may phone in your logs between 1200 and 1600 UTC. We'd love to hear from YOU! Bye for today & 73s!

radiotelex

Issue 128 / Vol. 5

July 4th, 1988

c/o Duempter /strasse 6, D-4100 Duisburg 12, West Germany.

Hello everybody,

it's time for yet another episode in the eventful life of Free Radio on shortwave. Even though propagation conditions were a bit weird on June 26th due to a bit of solar disturbance, we have managed to compile a pretty extensive list of stations that were logged over the last couple of weeks. Thank you very much for your contributions, particularly to those of you who took the trouble and phoned in yesterday (7 DXers from West Germany, one from Sweden and, of course, Anoraks UK)! Enclosed with this issue is a new edition of the "Current Pirate List" address directory which some of you might have missed last time, this was because the mail from Sweden took quite a bit of time again! The next address list should be published along with RT 130, ie. about this time next month.

Some comments on today's loglist, three different transmitters on/around 6230kHz caused quite a lot of confusion last Sunday, probably the worst example of mutual interference on 48 metres for a long time. Why not have a look at the RT logs to find a channel that apparently isn't used by every other station. One contributor told us he received Westside Radio both last Sunday and the previous one on 6310kHz which seems to be a little mysterious to us. Did anybody else hear WRI on a frequency of 6310, we wonder.

As we have some space left this time, we decided to throw in a column that seemed to be quite popular at the time it was first invented :

QUOTATION OF THE FORTNIGHT

Radio Kristel Int'l thought it was time to make one thing clear (indeed that is true for most shortwave radio pirates) when stating in their latest info-sheet "programmes are broadcast on a site in an open field or wood, away from populated areas, and not from our mailing address".

For the biggest selection of free radio merchandise, incl. "Weekly Report" and medium wave frame aerials...contact "ANORAKS U.K.", P.O. BOX 539, BLACKPOOL, FY1 4RE, ENGLAND.

NEWS

The Alternative Music & Entertainment Channel informs us that relays over R.Waves Int'l from France should begin in September this year in addition to AMEC's regular broadcasts via Radio Tutenchamun, the next of which will be heard in mid-July on 48 metres. The station intends to commence transmissions with an own 30-watt-tx some time later this year, probably in autumn. By the way, the first broadcast produced some 25 listeners letters, the second just 3.

Belgium's only shortwave pirate at present, Radio Brigitte is said to have new QSL-cards available, so are three new stickers showing some of the station's presenters. Brigitte is audible usually once a month on approximately 6310kHz, just listen out for the terrible modulation !

According to FRD 8, Radio Caldonia are presently on a summer break that is to last till September. Meanwhile, plans to test a new tx on 7375kHz have been announced, so check out that channel from time to time. In general, free radio stations appear to move back to 41 metres again, just remember that there was almost no activity at all above 7 MHz a year ago !

Empire Radio recently celebrated its 10th anniversary with a special transmission on 6298 (apparently relayed by R.Orion) and 7375kHz (own tx ??) on May 29th, 1988. The broadcast was just a one-off but who knows the station may change its mind if enough listeners urge it to come back again. Empire used to be very popular with a comedy programme format in the late 70s. If you heard the birthday show, why not write in at PO Box 944, Edgbaston, Birmingham, England.

European Music Radio is reported to construct a new transmitter at the moment. Since its return last year, EMR has used a number of different frequencies which we shall list now for your convenience in case you're looking for them on the 3rd Sunday in July: 6264, 6319, 6340, 6511 and 6725kHz. We can particularly recommend the Roger Tate mailbag show (having had the honour of talking to Roger's answering machine...).

Radio Indigo from Holland intends to buy a 100-watt-shortwave transmitter which will probably be tested in July/August. Indigo will be back with normal programmes in August or at least in September. / CPL 14

A new station which is going to hit the airwaves for the first time on Saturday, July 16th is Radio Karibu (c/o RT Drop Box, PO Box 103771, D-2800 Bremen 1, West Germany). Proposed transmission time is 10.00 - 13.00 UTC on the date just mentioned, an own tx will be in operation. Please don't mix up that station with Radio Marabu from West Germany (Karibu and Marabu may sound about the same through the shortwave crackle but the stations are not connected to each other), even though the music on both stations is rather "alternative" to what you usually hear on the radio bands.

We have word from PFBS Radio that the recent relay over Radio Pamela has been a one-off as the station prefers to be heard using its own tx facilities. Pirate Andy was also most unhappy with 6815kHz being used for that occasion as East Coast Commercial was broadcasting on that channel the same day and later ran into trouble with Pamela's signal. PFBS hopes to be back probably on Saturday, July 16th, on 48 metres between 08.00 and 11.00 UTC. Mediumwave tests have been suspended for the time being as the current summer conditions aren't worth the effort but nonetheless there may be further broadcasts on medium wave during the next winter season.

Radio Powerplay is the name of a new German-based free radio station which is going to transmit on 48 metres pretty soon. According to an advert in a back issue of PIN Magazine, the station's address reads as follows: c/o PO Box 2448, D-2350 Neumünster, West Germany. Please note that that address is just a tentative one as it has not yet been confirmed by the station.

BLACKPOOL, FY1 4RE, ENGLAND.

but unfortunately nobody has yet come up with
a 100% ID. Hopefully there will be further
details on that in a forthcoming issue of RT.
The programme heard last Sunday consisted of
various tracks taken from the current top-40
in Holland along with pre-recorded IDs spoken
by a boy (the operator's son ? / the second
generation of pirate radio ?). One thing is
for sure right now, the station's address :
Postbus 24, 7260 AA Ruurlo, Netherlands.

Still in the country of milk and ... cheese,
Tower 41 was received on 6240kHz over the 2nd
weekend of July with good signals over here. It
is interesting to see that the station has hardly been logged on the 41
metre band despite calling itself "Tower 41". Never mind though, it
mustn't be forgotten that a mailing address of Postbus 19074, 3501 DB
Utrecht, Holland was announced in the recent broadcast. I'm not sure if
the address that was previously mentioned (Postbus 81, 3450 AB Vleuten)
has closed down or whether the Utrecht maildrop is used additionally.
Once again, it has to be pointed out that other Dutch stations should
learn how to present a decent quality programme as Tower certainly did
last time. Sadly, there are still too many operators who believe that
shouting "testing...one, two..." makes interesting listening. It's just
too bad to note that apparently the most powerful stations offer about
the worst programming. Think about it !

As a f/up to the item in RT 127, W.A.B.C. from Garvagh, Eire have been
back on shortwave 6295kHz, first logged last Friday morning, July 15th.
24 hour a day operation on that frequency has been resumed it seems,
signals have been quite encouraging even though 6295 is often jammed
out by a utility service over the weekend. The station often IDs as
"FM 101", hence the FM service is relayed "worldwide". A DXer from West
Germany noted the station on 6297kHz around lunchtime last Sunday, maybe
the tx drifted up from 6295 where it was heard earlier in the morning ?
For all those of you who want to contact the station, here's the address
once again: The Lodge, The Manor House, Greencastle, Co. Donegal, Eire.

A Finnish free radio enthusiast will be on tour through the British
Isles and the European continent by InterRail along with his girl-
friend in August. He would like to meet other people interested in
pirate radio and visit free radio stations, if possible. If you
would like to offer a piece of your room or get visitors to your
station, please contact Mr Nieminen, P.O.Box 82, 40101 Jyväskylä,
Finland.

The above "public service announcement" just reminded of me of an
enquiry received of late asking about small adverts placed in an
issue of RT. Well, if you have a brief & private advert, just send
it off to our address, it will be published free of charge.
Commercial advertisers (whoever that may be...) might be interested
to hear that a full page will cost you just 10,-DM or the equivalent
in your currency. If possible, send in a sheet that is ready for
copying, and please it has to be on a radio-related topic !

Finally, the usual reminder of RT's next deadline which will be on
Sunday, July 31st, 1988. The lines are open between 1200 and 1600
UTC for your logs and news, of course, if you have any queries,
you may try your luck, too !
Meanwhile, have a good time, 73s & FFPR from R A D I O T E L E X

radiotelex

Issue 129 / Vol. 5
July 18th, 1988

c/o Duempter /strasse 6, D-4100 Duisburg 12, West Germany.

Dear radio freaks,

believe it or not, it IS summertime even though the weather makes you
think we could be just ahead of X-mas again. Anyway, I don't mind
really because I won't be on holidays over the next months, so why
should I care if it's raining all day if I have to work ?
Don't worry that's all the philosophy that you will be treated with in
this issue of RT. I'm afraid to say though that there isn't too much
free radio news today but I think that the loglists make up a bit for
it.

A piece of internal news to begin with, the RT addresse service at
P.O.Box 103771, D-2800 Bremen 1, West Germany will be suspending its
activities for a couple of weeks due to (guess what !) holidays. For
that reason, letters to any station that is using that maildrop as
well as orders with regards to the SAE-service cannot be dealt with
between July 22nd and August 5th, 1988. Of course, you can always
write to that address and your mail will safely be kept in the P.O.
Box until the first weekend of August. Please note though that the
Duisburg address can only be used for mail intended for this mag,
e.g. contributions, subscriptions etc.
Talking of your support, special thanks to all of you who sent in any
logs & news over the last couple of weeks, and to those who rang me
up yesterday (5 DXers from Germany, one from Sweden and, last but not
least Anoraks UK from the UK).

HOLLAND

Offshore news first of all, there have been quite a few important changes with regards to the broadcasting services from the MV Ross Revenge. A Dutch language service is now heard on 558 kHz daily between 0500 and 1700 UTC which has yet to get a station name. So far, on top of the hour the service has only IDed as "AM 558". The English programming on Caroline can now be heard on medium wave, 558 kHz of course, during the hours the Dutch service aren't on. Of great interest to all DXers is the fact that Caroline 558 is now aired again over the shortwave outlet on 6215 kHz between 2300 and 0500 UTC which certainly makes good long distance listening. World Mission Radio continues to be on 6215 kHz for the rest of the day with the almighty Johan Maasbach tapes aired at various times throughout the day.

Neal West of Radio East Coast Commercial recently wrote in explaining about the co-channel QRM caused by RECC, Rainbow (Ireland) and Atlanta Radio being on 6230kHz July 3rd. An agreement is said to have been arranged between RECC and John Dean of W.L.R. some time before that the Rainbow tx would switch to 6310 and would leave 6230 clear for RECC again. However, John Dean and Hedy Eddie without any advance notice decided to move back to 6230kHz that Sunday. The interference caused by Atlanta, by the way, took place because of unfortunate circumstances, the station had written off to RECC before but the mail from the P.O.Box didn't reach Norman Nelson before the broadcast went on the air. Well, after all, RECC do not wish to have any further "agreements" with W.L.R. Nonetheless, all other stations who are interested in frequency co-ordination with RECC are more than welcome to drop a line to P.O.Box 5 Hunstanton, Norfolk, PE36 5AU, England.

Radio Marabu International, c/o Wuppertal & Utrecht-addresses, told us that the station has altered its broadcasting schedule. RMI will be on the air every 4th Sunday of the month beginning next Sunday, the new channel will be 6310kHz though with the recent moves of the SFRN as mentioned above, it may well be on 6231kHz. In any case, a 2-hour-show is put out between 0800 and 1000 UTC. July 24th should bring the Dutch service hosted by Kees Snijders back with a repetition of his debut programme which was hardly audible the first time it went out.

A new free radio project of Dutch origin was heard for the first time last Sunday, July 17th on 6315kHz with a powerful signal across most of Western Europe. The station called itself "Radio Son" or "Radio Sun",

CLU-103, JETZT IN DER VERBESSERTEN MARK-3 VERSION LIEFERBAR!

Der CLU-103 Mk3 ist eine Weiterentwicklung des legendären Mk2 Modelles, welches sich bereits seit Jahren in professionellen Studios, bei Musikern und natürlich auch bei Radiosendern im In- und Ausland tausendfach bewährt hat.

Seine überragenden technischen Daten, sein funktionelles Design, sein günstiger Preis und seine individuellen Einsatzmöglichkeiten bieten eine echte Alternative zu bestehenden und weit teureren Audio-Processoren für alle professionellen Anwendungen.

Das Compressor/Limiter-System CLU-103 Mk3 ist eine KRE-audioelektronische Innovation und derzeit ausschließlich vom Hersteller zu beziehen. Da wir ohne Zwischenhändler auskommen, sind wir in der glücklichen Lage, diesen Preisvorteil direkt an unsere Kunden weiterzugeben!

Nehmen auch Sie am technischen Fortschritt teil, denn nur das BESTE sollte Ihnen gut genug sein.

- Im Vergleich zum Mk2 Vorgängermodell bieten die Geräte der dritten Generation folgende Vorzüge:
- ausgeglichener Frequenzgang: volle 20 Hz bis 20 kHz
- deutlich verbesserter Rauschabstand: weniger als -85 dB
- Total Harmonic Distortion (THD): kleiner 0,03% bei 10 dB G/R (1 kHz)
- alle Funktionen sind nun stufenlos regelbar
- die elektrische Sicherheit konnte durch Primärabschaltung vom Stromnetz samt Feinsicherung verbessert werden
- überarbeitetes Design, welches durch seine ergonomische Gestaltung die Zuordnung der Bedienelemente erleichtert

Unser extrem günstiges Preis/Leistungs-

verhältnis wird derzeit von keinem anderen Hersteller unterboten!

Bestellhinweise:

Die Lieferung im Inland erfolgt per Nachnahme oder Vorkasse (V-Scheck oder Vorausüberweisung auf das Girokonto 502674 bei der Stadtparkasse Gevelsberg, BLZ 454 500 50).

Eine Lieferung ins Ausland ist nur bei erfolgter Vorauszahlung möglich! Auf jeden Fall ist eine schriftliche Bestellung, auch bei Vorkasse, erforderlich!

Die Lieferzeit beträgt in der Regel zwei Wochen, gerechnet ab Bestelleingang (Nachnahmeversand), bzw. Tag des Überweisungseinganges.

Preis: DM 259,-
+ Versandkostenpauschale:
Inland (Vorkasse) DM 5,-
Inland (Nachnahme) DM 10,-
Ausland (surface mail) DM 10,-

Ab einer Bestellung von 2 Geräten entfällt die Versandkostenpauschale! Detaillierte Produktinformationen sind gegen eine Schutzgebühr von DM 1,20 in Briefmarken / IRC erhältlich.

Gleich mitbestellen:: Cynch-Audio-Kabel für gehobene Ansprüche mit 4 vergoldeten RCA-Steckern (Cynch), Länge: 1 m NUR DM 12,80

Bei gesonderter Bestellung plus DM 1,50 Versandkosten (Vorkasse).

WIR STELLEN AUS:

PIN-Magazine Free-Radio-Meeting am 8. und 9.10.1988 in Meinerzhagen - Produktvorführung! Wir freuen uns auf Ihren Besuch. KRE-audioelektronik, Postfach 22 03 42, D-5600 Wuppertal 22

Issue 130 / Vol. 5

July 31st, 1988

c/o Duempter /Kasse 6, D-4100 Duisburg 12, West Germany.

Hi there,

welcome to another summer edition of this magazine, a holiday issue rather, particularly as far as the loglist of this weekend is concerned. Never mind though, there should be plenty to read this time as the newsfront didn't take a break it seems.

By the way, we recently received a letter from one of our subscribers who asked us to include more medium wave station logs in RT. Well, in general we shall publish all logs we receive that deal with stations on shortwave and mediumwave that put out some kind of international programming, in other words polka pirates on 180 metres are normally omitted! Of course, we appreciate any MW logs even though there doesn't seem to be that much of activity on that part of the dial.

In any case, RT will remain a shortwave free radio newsletter above all, which we believe is what most of you expect us to provide.

Thanks a lot to everyone who contributed to RT this time, this Sunday was a bit quieter than usual with Anoraks UK missing due to holidays, therefore you won't find any UK logs for this weekend.

Radio Waves International, BP 130, 92504 Rueil Cedex, France have told us that new QSL-cards have finally come from the printers, both for RWI itself and "W.C.S.", the special service Waves put out over Easter this year. RWI seems to have changed its frequency now from 6271 to 7440 kHz with its usual programming. Apart from that, the station is regularly relayed by its French colleague Radio Luce on 7375 kHz.

W.F.R.L. Worldwide (Hunstanton addr) tested a new tx on 17500 kHz around the clock July 30th/31st with a two-hour-tape loop as part of the station plans to use the higher part of the shortwave spectrum apart from 48 and 41 metres. Further tests should soon take place on 11115 kHz (another odd channel !) but no fixed date is known yet. The regular 2nd Sunday broadcast of WFRL on August 14th should go out on two frequencies, 6300 kHz between 0900 and 1055 UTC, and on 7385 kHz 1100 - 1400 UTC. A one-hour special with regards to the MOA anniversary is to be aired that day as well.

"From somewhere in the Atlantic to Europe", Radio 101, c/o Postfach 2, 4680 Gemmenich, Belgium, returned to 41 metres last weekend but on a new frequency, 7296 kHz. Amazingly, reception seems to be worse compared to previous broadcasts on 7361 kHz but this may be due to the current propagation conditions. It is not clear if 7296 will be 101's permanent frequency for the time being, just check it out every now and again ! At present, 101's own programming is put out as well as relay programmes by Radio DX-34, Radio California and Radio Joystick.

NEWSDESK

Radio Apollo International, c/o P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England, told us that the station's next broadcast is scheduled for Sunday, August 14th, 1988 on 6285 kHz. As the date already implies, there will be a some sort of commemoration of the introduction of the MOA in the United Kingdom way back in 1967 on that day. RAI will also pass its 500th hour of broadcasting on that occasion, so there may be even more special features coming up on August 14th, apart from the usual line-up of shows hosted by Duncan James, Mike Davis and Dave Scott. Don't miss the "now cult zany mailbox programme" (quoting Apollo's latest info-letter). By the way, there was no transmission of RAI in July this year due to holidays !

During today's broadcast of Atlanta Radio, it was mentioned that the next broadcast by sister station Radio Cavendish should take place pretty soon somewhere on 48 metres. Atlanta itself seems to be more active at the present time, over the last couple of years the station has been on the air just once or twice altogether. Atlanta uses the Hunstanton maildrop, Cavendish's last known address was c/o 128 Kingfisher Drive, Eastbourne, Sussex in England.

A rather mysterious station by the name of Radio Claymore turned up on shortwave on July 24th, first on 6283, slowly drifting down to 6278kHz where they were noted just before closing down. The programme consisted of nonstop music with occasional station IDs, the station's slogan was remarkable, "with 250 watts from 120 miles offshore" as it was called wasn't intended to hint at a broadcast ship but rather point to an oil platform. Please take note of this excerpt from the utility QSL page

of the famed DSWCI "Short Wave News" magazine, the July 1988 edition. Well, in spite of that interesting piece of info. (thanks to the guy who supplied the cutting), you shouldn't really believe that the actual broadcast came from one of these platforms ! Judging by the signal quality, it is more likely that the transmission came from a piece of dry land somewhere on the European continent, we suspect. A mailing address of c/o Postfach 220342, D-5600 Wuppertal 22, West Germany was announced. We're curious if that broadcast was just a one-off or the start of a new station, time will tell, hopefully !

Radio East Coast Commercial continues to be in the news with weekly broadcasts on 6310 & 6815 kHz. Recently, RECC have begun relaying programmes by a couple of fictitious spoof stations in order to highlight what appears to be a growing trend these days, definitely unwelcome by RECC. The stations heard were IDing themselves as Sunnyside Radio (DJ Victor Davis) and Tasmanian Tempest Radio (DJ Tom Cat). According to RECC, the programmes were produced by two people totally unconnected to East Coast Commercial who had never done anything like that previously. The programmes were aired to make the point that such relay operations are a complete sham, they are not radio stations and as such should not accept reception reports or send out QSLs. Now that RECC has raised that point for public discussion, we would be very much interested in what you think about relay stations in general, please tell us your pros and cons, whether you would like to have the relayed stations abandoned from the airwaves or if you want them to stay. Let us know (and all other readers of RT, too, of course) what your opinion is on that subject. Provided that there will be enough response, we shall print some of your views in an upcoming issue of RT.

The Dutch pirate radio operators have been rather active again, with a couple of more or less new stations logged this weekend, the first of which is Radio New World, formerly known as Radio Free Europe. However, the majority of listeners seemed to be not too happy about that choice, so the station changed its name lately. Radio New World is a joint project of Radio Torenvalk and Radio Tonair, the first broadcast under the new name took place on July 31st on 6205 (Tonair) and 6240 (Torenvalk) with a test programme aired on both frequencies at first though it wasn't simultaneous (the 6240 outlet was slightly ahead of the 6205 tx). Various QSOs (gosh !) were made during the course of the morning, too. It was announced that the next broadcast may be transmitted over three transmitters (all on 48 metres - what sense does that make ??)... You can drop a line to the station at Postbus 21 (Tonair) or Postbus 36 (Torenvalk), 7010 AA Gaanderen, Netherlands.

The second newcomer to shortwave from Holland was Radio Pluto which put out a test transmission July 31st, 1988 on 6315 kHz. The tx power is said to be 70 watts that day, and the station's mailing address reads as follows: c/o Postbus 103, 8120 AC Olst, Holland.

According to the latest info-sheet of Radio Waves, a new station by the name of Total Control Radio was aired for the first time on July 10th on shortwave (relayed by RWI ?). An address was mentioned of T.C.R., 34-36 Leys Road, St. Neots, Cambridgeshire, PE19 1ES, England. Any further info. on that new project would be very welcome.

After a break of several months, Radio Universum (Wuppertal mailing address from West Germany is going to hit the airwave soon, probably some time during August with a 2-hour-broadcast. The following line-up of shows shall be put on the air then :

0900 UTC Music Special / 0930 UTC English service / 1000 UTC Mailbag and DX show / 1030 UTC Guest DJ programme / 1100 UTC Closedown.
Here's a list of frequencies that may be used for that transmission : 6282, 6293, 6297, 6400, 6425, 6553 or 6591 kHz. Listen out !

played but by now full programming including the usual reports from the world of broadcasting and electronics has been introduced again. Here's the mailing address used by Radio Fax over the test at Easter this year: 1 High Ash Farm, Caistor St. Edmunds, NR14 8RH, England.

Word has reached us from the Free Radio Service Holland that their 8th anniversary show shall take place on August 28th, 1988 on three frequencies, 6225, 6285 and 7290 kHz. 6205kHz which was originally planned has been dropped since Radio Fax is now using that frequency permanently. The special programme line-up for that day reads as follows:
0954 UTC Opening incl. station theme & station IDs
1002 Mark Stafford show with lots of records from the years 1980 - 1988, a flashback to August 1980, the month FRSH officially begun on shortwave

1100 "FRS Goes DX" hosted by Peter Verbrüggen, the latest from the world of wireless with the emphasis on Free Radio
1145 "FRS Birthday Party" with Gerd, Bobby Speed, Peter Verbrüggen, listeners letters and memories from the last eight years
1330 Danny Kay show with music and FRS memories
1430 Closedown.

During the broadcast there will be a special competition testing your knowledge on radio. Prizes include a video recording as well as a Laser and FRSH cassette tape. The competition will be played five times throughout the broadcast.

As from August onwards, FRSH offers a brandnew photo-QSL in various colours. A bumper issue of "FRS Goes DX" magazine will be released just after the broadcast and is promised to be with improved quality. Anything forgotten? Oh yes, the address, it's still PO Box 41, 7700 AA Dedemsvaart, Holland. Happy birthday from all at RT!

Tower 41 has now confirmed that the station's official address is c/o Postbus 19074, 3501 DB Utrecht, Holland. The station seems to have settled down on 6240 kHz since response has been improving ever since the 48 metre band has been used! It was also mentioned that you, the listeners, don't have to send any IRCs, picture postcards will do fine, too, as the op. apparently is into collecting these goodies. By the way, many thanks for the "special mix" you played today!

PRO & CONS - RELAY STATIONS

Our appeal to you in RT 130 has already produced a reply from one of our readers who comments on the recent discussion on relay operations. Here is what he wrote:

"Talking about relay and relayed stations, I think that both have to stay on the airwaves! The relay stations are very useful for those who are DJs but who cannot build any txs or for those who don't have enough money to buy a transmitter. The relay stations can also offer airtime to the stations recently raided! Also, some relay stations rent their transmitter and, as a result, they earn some money to offer best services to the listeners. The relayed stations must also carry on! All are not bad! Have a look at FRS-Holland, they don't have any tx, however, they are one of the best stations! And there are also stations who have a tx and who are quite bad, e.g. Brigitte. And if Norman Nelson doesn't appreciate any station, he just has to turn the knob!"

Is there any more to say? Well, just remember that if you have something to tell others, then let us make your voice.

Sorry there isn't enough space for a QSL section this time, probably more in a couple of weeks' time, don't forget we're also interested in your blacklists (of stations that haven't replied after six months).

"Time for talking's over now...", 73s & PFR from R A D I O T E L E X.

Issue 131 / Vol. 5
August 14th, 1988

c/o Duempter / Arns 6, D-4100 Duisburg 12, West Germany.

Welcome everyone

to a truly summer edition of RT with a loglist that is breaking all the records, at least as far as the amount of updaters is concerned, hi... In spite of the hot weather, there aren't too many hot news items but the ones we're able to present today may be important for most of you for quite some time. Why? Read on and find out! Thanks to all those who contributed to this issue by sending in their views on relay stations, we hope that a kind of discussion can begin which should include the ideas of listeners who log such stations as well as stations that either put out relays or rely on other pirates to air their shows. We'd be pleased to receive your comments! Thanks to 7 DXers from three different countries who phoned in this afternoon with their logs, please keep in mind that deadline for RT 132 will be in two week's time again, August 28th, and the lines will be open again between 1200 and 1600 UTC.

Just a few remarks on the logs, Radio Dublin on 6910kHz were apparently missing this weekend, whether that will be the case for the time being isn't known at the moment. General propagation conditions were rather good today for a change, particularly UK stations came in better than they usually do on 48 metres, to the likes of Radio Apollo who celebrated their 500th hour of broadcasting today. Most British stations put out some sort of tribute to the introduction of the MOA bill on August 14th, 1967, e.g. R.East Coast Commercial broadcast tapes of the WRLI-Radio London proposed offshore project from 1985 whose only programmes were aired over Mexican border blaster XERF and several European short wave pirates.

When listening out for stations on 48 & 41 metres, you shouldn't forget to check out other frequency bands that free radio stations have also used in the past and which may be in operation from time to time, e.g. 6511 kHz European Music Radio and 5295 kHz for German stations.

NEWS

Radio CLCG, c/o Postfach 540101, D-4100 Duisburg 11, West Germany, told us that their broadcast on 6315 kHz July 24th, 1988 was relayed by Radio New Wave Int'l from Holland who are said to use a new 500-watt-tx since early August. The Clandestine Listeners Club Germany also offers to send everyone a sample copy of its June and July magazine editions for just DM 4.50/4 IRCs/4 US dollars (the regular price would be DM 3.00/3 IRCs/3 US dollars per issue). This offer is only valid until the end of August. By the way, Radio CLCG is going to use another new relay from the Netherlands probably already this month !

The most important news this time, Radio Fax is back ! First noted on Thursday, August 4th the station has resumed broadcasts on 1611 at night and 6205 kHz during daylight hours, from a new permanent site at the East coast of Ireland. As the latest logs have shown, there seems to be some form of co-operation between Radio Fax and Radio Rainbow International from Drogheda who use 6231 kHz on Sunday mornings. In fact, part of the programming usually heard on Rainbow has also been monitored to be running in parallel over Fax on 6205, e.g. W.L.R. It has been suggested that both signals are emanating from the same location. During the first days of Fax comeback only nonstop music & offshore jingles were

PO Box. Therefore, the Postbus 36 is no longer valid for Radio New World but instead a new maildrop has been introduced which is Postbus 92, Zeddum, Holland. Apart from that, you can still write to Postbus 21, 7010 AA Gaanderen, Holland. It was mentioned that the stations next broadcast should take place in about two weeks time, ie. September 11th, 1988.

Radio Scotland is yet another Dutch medium wave station which has recently joined the shortwave operators with its first official broadcast on August 21st, 1988 on 6270 kHz (causing quite some hets to Radio Waves just 1 kHz above). The station can be contacted at Postbus 85, 9410 AB Beilen, Netherlands.

After an absence of several weeks from the shortwave, Starfleet Radio, Postbus 19074, 3501 DB Utrecht, Holland, has tested on 6204 & 6295 kHz on August 15th. According to the station, the permanent frequency shall be changed to the 41 metre band as the main channel of 6295 kHz is presently jammed by utility most Sunday mornings. There will, however, be one further broadcast on 6295 kHz when a 45-minute-relay of Radio Powerplay, c/o Postfach 2248, D-2350 Neumünster, West Germany, shall be put out. That station is said to be active under the name of Radio Starline and is currently looking for relay stations to air their shows. Back to Starfleet once again, new promotional material is now available but we have been told that those of you waiting for a reply should please be patient for the time being.

A letter just received from Radio Susan informs us that the station is not a new one, for the last five years there have been broadcasts on FM under the name of "Wellingborough Local Radio". The station's mailing address is: M.A.C., PO Box 109, Northampton, England. The current programme schedule reads as follows:
0900 Phill / 1000 Dave King / 1100 a show presented by one of the female DJs, either Rosy or Debbie.
Radio Susan hopes to start a German and Dutch service soon as the station's policy is to become more European, still within the regular rock music format.

Radio Titanic Int'l (Dedemsvaart-address) has been active once again last Sunday, August 28th, on 5300 & 6200 kHz with a power of about 17 watts. RTI should be celebrating its 13th anniversary later on during autumn this year, probably using two channels, one of which should be 5300 kHz once more.

Total Control Radio whose first ever show was relayed by Radio Waves on July 10th, 1988 are planning to have a second programme put out by RWI in early September. That time, a new format of soul music and radio news shall be introduced. A special feature on Radio Caroline is also planned for that broadcast. The all important address is TCR, 34-36 Leys Road, St. Neots, Cambridgeshire, PE19 1ES, England. The v/s is Mr Desmond D'Cruz (well, as long as it's not Ronald Regan...I don't mind, ed).

Finally, apologies for not including both QSL info and "Pros and Cons" in this issue, maybe next time we'll be able to figure out how to operate our new hi-tech equipment.

By the way, did anyone figure out the answer to the FRSH birthday contest ?? Well, the correct answer is ... (sorry, no space !).

radiotelex

Issue 132 / Vol. 5

August 28th, 1988

c/o Duempter / Wavre 6, D-4100 Duisburg 12, West Germany.

Dear radio friends,

surprise, surprise ! This issue is the first one in the recent history of Radiotelex which is compiled with the help of a computer. As this is a debut for us as much as it is for you, we do hope that not too many things go wrong today. Alright, we have to mention some sad news now, due to the CPL staff moving house it will not be possible to provide you with the address list as we have done so far. We are not totally sure when we will be able to resume that service for you but we shall let you know in time ! Thanks to everybody who contributed to this issue, please do not forget to send in your news and logs for RT 133, deadline for that issue will be September 11th, 1988. The lines will be open that day between 1200 and 1600 UTC, we look forward to hearing from you !

It might be interesting to note that quite a few stations in recent weeks have started to use two channels on two different wavebands, e.g. Radio East Coast Commercial (6310 & 6815 kHz), FRS-Holland (6225, 6287 & 7290 kHz), R.Waves Int (6271 & 7440 kHz) and R.Titanic Int (5300 & 6200 kHz). In fact, not all these broadcasts on at least two frequencies are in parallel thus indicating that two different sites are used at the same time.

NEWS

Radio Claymore has been reported on 7302 kHz in SSB mode on both July 21st (21.00-22.00 BST) and July 24th (10.00 BST) by a German radio ham who was on vacation in Scotland at that time. The station was originally logged July 2th on 6278-83(v) in AM with a test broadcast. The address is c/o Postfach 220342, D-5600 Wuppertal 22, West Germany.

Radio Fax continues to use 6205/1611 kHz on a regular basis and is sometimes heard over the Rainbow/SFRN transmitters on 6231 and 6318 kHz. Please note the new address of R.Fax which is different from the one announced during the Easter tests: The Fodge, Lucks Green, Cranleigh, Surrey, GU6 7BG, England.

During last Sunday's broadcast, Radio New World announced that some 20 letters have been stolen from the Postbus 36-address by Radio Black Hunter, another station which is also using that

station also offers stickers, posters, T-shirts and studio recordings, for details please write to the maildrop mentioned above.

Guernsey Sound, 23 South Beechwood, Edinburgh, EH12 5YR, Scotland, has suspended programmes for the moment due to lack of response. In addition, the operator wasn't happy about the way the Scottish Free Radio Network kept re-arranging times, schedules and frequencies etc. !

One of these odd errors appeared in RTT 132 regarding the address of Radio New World. Please note the correct one: Postbus 94, Zedam, Holland.

The mailing address of Radio Pandora is 121 Ballyfermot Road, Dublin 10, Eire. The station has been heard fairly regularly over the transmitter of Westside Radio since Easter this year with DJ Gary Lewis behind the mike. Pandora has a QSL-info-sheet available for everybody who's writing in. According to the staff, there are plans to use an own tx in the future.

A letter we received from Radio Pluto informs us that the station is going to test its shortwave tx from time to time these days using a 70-watt-tx (EL84 & 807 valves) along with an inverted V aerial. Next year Pluto hopes to come on the air with a high power rig of some 500 watts (2x PL519); QSL-cards are not yet available but shall be sent out later on. Frequencies to look for the station are 6315 and 6390 kHz. Address: Radio Pluto, Postbus 103, 8120 AC Olst, Netherlands.

Radio Starline (ex- Radio Powerplay) wrote in to tell us that the only address to contact them is c/o Postfach 220342, D-5600 Wuppertal 22, West Germany; the Neumünster address is no longer available. At the moment, the station is still looking for anybody who is able to relay them on shortwave. An own tx should be used some time next year if the listeners appreciate the station's programming.

At last, we're now able to solve the mystery with regards to the station which broadcast on 6315 kHz July 17th, 1988. The actual station name is Radio Sunny (Postbus 24, 7260 AA Ruurlo, Netherlands). As a matter of fact, the letter we got was entirely in Dutch as the operator is an 11-year-old boy called Wilfried who apparently can't speak any English. The transmitter used for the broadcast was a BC 610E rig connected to a 57 metre longwire.

Tower 41 has now settled down on 6240 kHz with regular broadcasts every 2nd and 4th Sunday of the month, now that the station will only use 48 metres Radio Tower has become the official station name. Tom Clay (German service including DX-info) and Pim van der Horst (ex-Radio Enterprise, now hosting the Tower mailbag show) have joined the station lately. Listen out for a 60-minute-guest show with Peter Verbrüggen coming soon !

Radio USA has been relayed twice over WFRL on 6300 kHz giving European readers the chance to get a reply from a truly rare station, the address is c/o PO Box 5074, Hilo, Hawaii 96720, USA.

As a complete suprise to most of you, World Mission Radio introduced some real programming aart from nonstop gospel and Johan Maasbach last Sunday, September 11th, when "WMR Goes DX" was first heard. The DJ who was Tom de Wit (ex- KBC-Radio, yet another surprise !) asked for info on legal and illegal radio stations from all over the world for his weekly programme.

Finally, deadline for RT 134 will be September 25th, 1988 (17.00 UTC), thanks a lot to everyone who contributed to this issue, next time hopefully all items held over from the last weeks incl. QSL-info etc. should be included in a "monster" edition of RT. Till then all the best !

radiotelex

Issue 133 / Vol. 6

September 12th, 1988

c/o Duempter Strasse 6, D-4100 Duisburg 12, West Germany.

Hi there,

another two weeks have passed by full of events regarding the world of Free Radio, thus there should be more than enough to read this time even though we received no contributions from the UK due to the nationwide postal strike there. Now that the paper says that that's all over things should be back to normal by the next issue. Talking of the post office, foreign readers may be interested to know that from now on we offer a new service to you. If you'd like to reduce the amount of money you have to pay for a subscription to this magazine, why not have RT sent to you as "printed matter" rather than in a sealed envelope which, of course, takes less time but is far more expensive. If anyone should be interested in that, please drop us a line !

The QSO stations heard September 11th on 6625/6630 kHz are believed to be based in Southern England. Radio East Coast Commercial announced that day that they would not be on 6815 kHz in addition to the usual 6310. It appears that a number of stations have recently transmitted during late evenings/nighttime on 48 metres including WFRL, Weekend Music Radio, R. Pamela, R.Gloria (UK), Radio DJ as well as Radio Blond Pirate. It may be worth checking that frequency range late at night even though no fixed times can be given when to try.

THE NEWSDESK

Radio Claymore, c/o Wuppertal address, recently replied to reports for the station's first test txmsn on July 24th, 1988, by sending out a QSL-card and info-sheet from which the following items are taken : The station is located about 120 miles east of the Orkney Islands in the Claymore oilfield. Frequencies used are 6280 kHz AM and 101 MHz FM, the latter for infield programmes, of course. Sporadic tests on 7296 (!) in SSB and on 27.225 kHz (FM mode) should also take place. Claymore broadcasts with a disused Marconi modified ship radio tx which is supposed to be about 400 watts PEP, aerials include halfwave dipoles for both 48 and 41 metres, two vertically stacked dipoles for 101 MHz and, last not least a GP for 27 MHz. The station plans to be on the air with a 5-hour-schedule every month in English, Norwegian and German, Sundays between 1100 and 1600 UTC. Since there is no real DJ out there, anyone who is interested in supplying programmes to Radio Claymore may send them in on a C120 tape leaving gaps every 15 minutes or so to cut in the Claymore jingles. The

radiotelex

Wavelength 23 has just come from the printers and contains lots of free radio info including three pages of shortwave news plus features on Radio Fax and a review of the new "Laser 558 Story" album. You can ask for a sample copy by sending 3 IRCs to PO Box 5, Hunstanton, Norfolk, PE36 5AU, England.

W.L.R. which continues to be heard regularly via Rainbow/SFRN hopes to acquire an own PO Box as mailing address. For the time being, the station can be contacted by writing to 100 Watson Crescent, Peterhead, Aberdeen-shire, AB4 6WS, Scotland.

World Mission Radio is reported to have plans for using 15045 kHz and maybe also a frequency on the 26 MHz band soon. "WMR Goes DX" shall be aired regularly on Sundays at 1000 UTC, even though some people don't like the style of that programme it's still a pleasant change from the nonstop gospel music and Johan Maasbach preaching.

PROS AND CONS

As we have some space left again this time, here are a couple of replies we received upon our discussion on relay stations.

The IRRS, PO Box 1686, Dublin 1, Eire wrote "ref RECC and relay stations etc and that they have no place on the air etc who does Norman think he is ? Saying they shouldn't QSL if they didn't then the listeners would not be to pleased having sent a report in although I do understand what Norman possibly means is it should be the station that actually txs the programmes that should QSL. But there are even legal stations that are actually relayed via other txs but you would not expect these stations to be in the wrong.

Also it does help to make more stations possible for less frequencies but even some stations use more than one at a time thus making it impossible for other stations to come on the air, some even pinch frequencies that other stations are already using, I think that is a more important criticism than relays."

One of our French subscribers had the following comments on this subject: "I am in favour of the stations which have no transmitter, and this for a lot of reasons. 1) Because we speak about "FREE" stations, and freedom is for all, even if you have or have not a tx ! 2) Because to me a good station is one which has an original programme (one which I can't hear elsewhere) and which provides good replies to listeners, so you can be a good station without a tx, of course ! 3) Because the more txs are on the air, the more QRM will be there. With less transmitters and several relays all stations can be put on the air with a good schedule and no QRM. 4) Many txs in a particular country invites the local PTT or other authorities to take measures against the pirates. If there are only a few good stations the authorities might be more complaisant."

ADVERT

Fabien Serve, Cidex A 3, Case 4, 19320 Marcillac, France is looking for the Wolfman Jack album "Let's Dance To The Wolfman Jack Collection", K-Tel Telemedia A2 # BLP 81172 as well as the single "Yap Land" by Jerome Brake (the national anthem of micro state Yap Land by the king himself, Brake 2...sounds a bit strange to me, hi -ed).

Well, that's all, don't forget that deadline for RT 135 will be October 9th, 1988, at 1702 UTC. We'd be pleased to hear from YOU !

radiotelex

Issue 134 / Vol. 6

September 25th, 1988

c/o Duempter Stra3e 6, D-4100 Duisburg 12, West Germany.

Hello everybody,

now that autumn is finally upon us once again, short skip conditions have returned with only poor signals from the UK audible on 48 metres here on the continent today. Perhaps the good old 41 metre band will get more attention by stations who are trying to cater for the long distance listener which might leave some more space to 6 MHz in future. Unfortunately, we aren't able to feature UK logs this time yet again as there are still some bad delays, the mail seems to take up to four weeks to reach us. Nonetheless, thanks a lot to everybody who contributed for this issue, please continue to give us your support !

THE NEWS

Radio Caldonia has now definitely closed down on shortwave even though a few months ago it was announced that the station would be back after an extensive summer break. Apparently, Caldonia has simply lost interest in shortwave broadcasting as the operators are still involved in free radio but locally on FM in the Rotterdam area, every Sunday between 1000 and 1800 hrs local time. Apart from Caldonia, Radio Aquarius Int'l will probably not be heard in the near future as the station relied on Caldonia to transmit its programmes.

After a very long time Radio Delta/Elburg was heard once again last Sunday, September 25th on 7425 kHz. The programme was hosted by "Mr. WBI" who used to operate another Dutch station called Radio Walvisvlei which also co-operated with Delta in the past. The programme aired of late was in fact an old one which was first broadcast in 1985 ! The following address was announced: Postbus 41, 8080 AA Elburg, Netherlands.

Talking of addresses, Radio DX-34 has changed its address, the new one reads as follows: c/o Postfach 100350, D-7016 Gerlingen, West Germany. The station has recently been heard over Radio 101 on 7296 kHz.

The UNID on 6280 kHz heard September 11th, 1988 (c/f RT 133) is believed to be a station called Radio Ohio though this is not 100% sure. There is no mailing address known for that one as yet.

September 25th, 1988 also saw a the first common broadcast of Germany's Radio Pogo 104 and Radio Indigo from Holland. The programme hosted by DJs Jeff Anderson and Henk was received on 6310 kHz via a UNID relay station. It appears that the broadcast was recorded some time ago as the show included an old RT promo spot with the Bremen address (thanks anyway). Although Jeff and Henk tried hard to break the world record by announcing the stations' addresses some 50 times during the two hours of transmission. Just in case you've missed that, Pogo uses the famous Wuppertal address, Indigo can be contacted via Utrecht.

Radio Scotland, c/o Postbus 85, 9410 AB Beilen, Netherlands, were raided on September 11th ! As far as we know, both the powerful medium wave as well as the shortwave transmitter were confiscated on that occasion though we don't know exactly if the station was raided for its recent broadcasts on shortwave. The station's future looks uncertain at the moment but you never know...

Total Control Radio now uses a new address: PO Box 130, 92504 Rueil Cedex, France. Station manager Desmond D'Cruz hopes to be on the air on a regular basis, maybe every 4th Sunday of each month. Future txmsns will be aired on either 7310, 7384 or 7490 kHz with 150 watts, relayed by the Scottish Free Radio Network. No transmission is planned via Radio Waves Int'l. So far the microphone level has been so low that it made listening rather difficult. We are told though that there will be no more problems with that in future !

Over to France once more where Radio Waves International has been off the air for the last couple of weeks due to the operator Peter Hills away on holiday in Southern England. Nonetheless, the station hopes to be back next Sunday, October 2nd on its usual frequencies, 6285 kHz with 25 watts and 7440 kHz with 50 watts of power. By the way, the change from 6271 to the present channel of 6285 was made because of QRM caused by "big power from the north of the Netherlands", to quote RWI's latest newsletter. The address: RWI, c/o B.P. 130, 92504 Rueil Cedex, France.

radiotelex

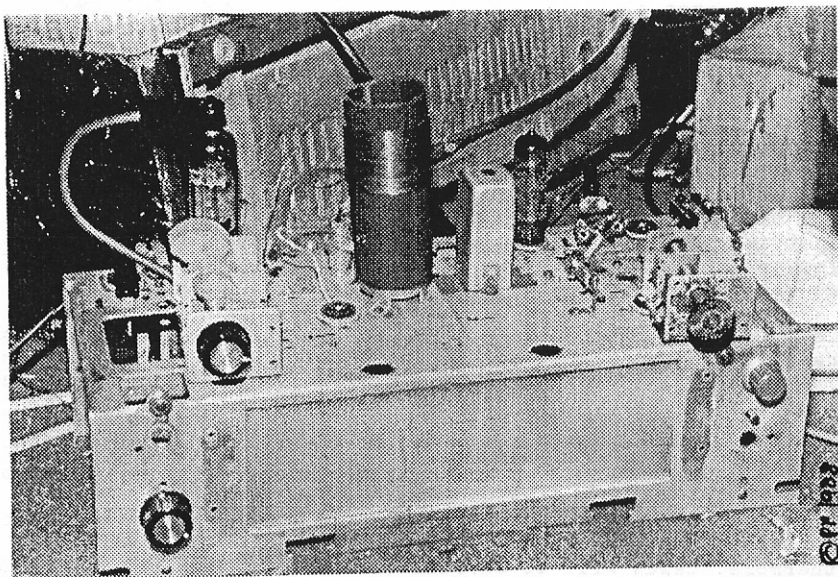

Radio Starline (c/o Wuppertal maildrop) intends to hit the airwaves soon via Starfleet Radio on 48 metres soon. The station didn't receive any reports for the first broadcast which was done under the name of Radio Powerplay on September 10th, 1988. Listen out for an oldies show hosted by Mr Jonny Pepperoni (no comments about DJ names this time ... -ed).

Wonderful Free Radio London (Hunstanton-address) has introduced its proposed worldwide service during early October under the name "WFRL Worldwide". There will be a 2-hour tape loop running for 24 hours on the first Saturday of the month on 9970 kHz, the following Wednesday on 12108 kHz and on the second Sunday of the month on 11170 or 11153 kHz. Additionally, there will be Sunday morning broadcasts on the 1st Sunday of the month on 7385 kHz 0800 - 1400 UTC as well as on the 2nd Sunday on 6300 kHz. Reports for the worldwide service are most welcome at the usual address.

Radio 48 (Germany), c/o Postfach 220342, D-5600 Wuppertal 22, W.Germany, should hit the airwaves once again with a three-hour-broadcast on 6286 kHz relayed by an unknown station.

Error Dept. Yes, finally we've managed to get it all wrong again. Not World Mission Radio but Weekend Music Radio from Scotland (42 Arran Close, Cambridge, England) plans to test on 15045 kHz and on 26 MHz soon. Sorry to those who listened out to Johan Maasbach there in vain !

Well, that's about all except to say that with this issue we shall resume an old tradition which has been held up since the early days of RT, our photo gallery. This time we have a look at the shortwave transmitter presently in use by Radio Pamela with EF95 & PL509 valves. The shot was taken in July 1988 ...

Issue 135 / Vol. 6

October 9th, 1988

c/o Duempter /Warte 6, D-4100 Duisburg 12, West Germany.

Dear Telex readers,

welcome ! In order not to waste too much time with yet another stupid editorial, let's start straightaway with a rather extensive loglist incl. many updaters from the UK. At last, we have all the mail from the British Isles after the postal strikes have finished over there. Thanks to all our contributors this time, deadline for RT 136 will be on October 23rd, 1988 at 1700 UTC (what a surprise !)...

ANORAKS

P.O. BOX 539
BLACKPOOL FY14RE
England

NEWS

Addresses. The 128 Kingfisher Drive maildrop which is used by a few UK-based stations including Radio Cavendish has slightly changed its address, all mail should now be sent to c/o 118 Kingfisher Drive, Eastbourne, Sussex, BN23 7RT, England.

Radio Charlene is the name of a relatively new German station which was heard on 6225 kHz on October 2nd, probably relayed by Radio New Wave. During the programme it was mentioned that that was the station's third transmission (what's happened to the first two as the station was unknown to us before ? -ed). The mailing address, by the way, is c/o Postbus 65027, 3002 DA Rotterdam, Netherlands.

Delta Radio (Hunstanton-address) should have tested on approximately 6230 kHz on Saturday, October 1st from 1130 BST onwards. So far the station has had extreme problems with their transmitting equipment but hopefully these should be solved soon. Delta should be on the air again on the 1st Saturday of November according to the station's schedule.

Radio DJ, c/o BP 130, 92504 Rueil Cedex, France, uses a 10-watt-Yaesu FT-757 GX ham transmitter connected to a halfwave dipole antenna. The station is actually a "one-man-operation" as only one guy does all the work. DJ usually can be heard on 6265 kHz with a weekly one-hour-show as well as via Radio Waves and Radio Luce from time to time.

Norman Nelson's **Radio East Coast Commercial** told us that the 6310 kHz outlet has closed down now, RECC continues to broadcast on 6815 kHz for the time being with 20 watts. P.O.Box 5, Hunstanton, Norfolk, PE36 5AU in England is the address.

The **Free Radio Service Holland**, c/o Postbus 41, 7700 AA Dedemsvaart, NL is going to be back on October 16th on 6225 kHz with the following line-up of programmes :

08.54 station opening/theme tune/IDs
09.02 "FRS Magazine" / Peter Verbrüggen & Gerd / including mailbag
09.45 German service with Danny Kay
10.30 "FRS Goes DX" / offshore & free radio news with Peter Verbrüggen
11.15 Mark Stafford Show in the English language
12.00 "Sounds Alternative" / Joop ter Zee
12.45 Closedown.

The October issue of the FRSH's listeners club magazine "FRS Goes DX" should be the first one with the number of pages increased to 20, and further improved layout. Subsequently, the annual subscription has been raised to DM 21.50. The station also offers a wide range of radio and video recordings, please ask for details at the above address.

Radio Kristel International has at last introduced yet another mailing address (does anyone know how many addresses RKI has used in the past ?), the new one is 294 Godstone Road, Whyteleaf, Surrey, England. The station is active every last Sunday of the month on 6295 kHz.

Back to Germany, **Starfleet Radio** (Utrecht-address) plans to introduce a new programme schedule which shall be aired every 3rd Sunday of the month on 6305 kHz, the line-up reads as follows :

0900 - 1030 Norman Walker / 1030 - 1200 Stefan Kramer "Hitarchiv" / 1200 - 1300 Jonathan Dee.

Furthermore, tests will be carried out on 6553 and 6618 kHz on Sunday mornings and during the nighttime hours on 6295 kHz (October 8th/9th at 0200 UTC). Special photo-QSLs should be issued for reports concerning the late night transmissions. Plans to transmit on the 41 metre band have been cancelled due to lack of clear channels there.

Radio Joystick, c/o Postfach 220342, D-5600 Wuppertal 22, West Germany, have booked a further couple of relays via Radio 101 on their 7295-outlet, these will take place on November 6th & 13th, each show lasts half an hour.

radiotelex

Sad news once again from the Netherlands, Radio New Wave Int'l is said to have been raided on October 16th when relaying FRS-Holland on 6225 kHz. Neighbourhood station Radio Blond Pirate also left the airwaves very shortly afterwards but is believed not to have been visited by the RCD.

Over to Germany, Radio Nordlicht was received again on 7362.5 kHz on October 16th in USB mode. That broadcast is supposed to be the station's last one in SSB modulation as Nordlicht is going to use a new 25-watt-AM-tx on 48 & 60 metres. The first transmission is lined up for early December on 6315 kHz, alternative frequencies are 5073, 6225 and 6235 kHz. The mailing address is RNI, c/o Postfach 6403, D-2300 Kiel 14, West Germany.

Radio Pandora has announced a new mailing address for the station which is Pandora's Box, Main Street, Clondalkin, Dublin 22, Eire. QSL-cards, info-sheets and other memorabilia is available from that address for return postage, 2 IRCs from Europe.

Süd-West-Radio, c/o Postfach 1203, D-6601 Heusweiler, West Germany, wrote in to tell us that the station's participation in the German Free Radio Corporation won't change SWR's pattern of broadcasting as some people had thought. The GFRC shall only go on the air once a year, and the three stations involved, SWR, Radio Limit Int'l and Radio California, will not end up in one station after all. There might, however, be guest DJ shows on Süd-West-Radio by DJs of the other two stations mentioned.

Radio Waves Int'l are going to celebrate their 5th anniversary on the air next month with another special broadcast under the name World Communications Service (WCS) over the 2nd weekend of November. All reports for that will be verified by a special QSL-card (pictured in a back issue of RT, by the way). 7440 kHz should be used during daytime hours, and 1536 kHz on the medium wave during the night as RWI hope to try MW. Listeners are invited to send in their Top 5 lists of favourite records from the 50s/60s/70s/80s plus today's chart hits. Waves, Luce and DJ all use BP 130, 92504 Rueil Cedex, France, as mailing address.

Ireland's longest running hobby pirate, Westside Radio continues to broadcast every Sunday morning early on 6820, later on 6280 kHz. Station manager Prince Terry was heard mentioning that he relays station tapes free of charge on the "Westside Relay Network" on both channels mentioned above. Write in at 310 Collins Avenue West, Whitehall, Dublin 11, Eire. 6820 kHz, by the way, is on from 0745 UTC onwards.

So, that's all for this time, please don't forget to send in or ring in your contributions to RT 137, deadline will be on Sunday, November 6th, the lines will be open between 1300 and 1700 UTC, we look forward to hearing from you then !

73s & FFFR from R A D I O T E L E X

NEWSDesk

Radio Atlantis SW are going to transmit next Sunday, October 30th, the frequency to be used then will probably be 6200 kHz. Amazingly, the station received some 10 letters for their previous broadcast, but 18 phone calls at the number announced during the transmission.

Big K Radio is currently relayed quite regularly over Radio Rainbow Int'l about every two weeks on 6231 kHz and can be contacted at the following address: 4 Blandford Road, Kidlington, Oxford, OX5 2KN, England.

Radio Caroline (offshore) has a new mailing address, PO Box 146, Playa de Aro, Gerona, Spain. That address is also used by Radio 558, the Dutch language station which is aired on 558 kHz during daytime.

With regards to the pronunciation of Radio DJ as "Dee Gee", one of our reporters from France wrote that in French "J" is read "Gee", and "G" is read "Jay", so this is why some confusion might occur among those who don't know about that. Typical French !

A new station from Ireland has been noted recently which might be heard on the continent as well, its name is Galtee Radio operating on 792 kHz. The address is Thomas Street, Limerick, Eire. The station is supposed to be carrying a regional service.

Ireland. The upcoming change in legislation in the Irish Republic is likely to erase that country of most of its unlicensed radio stations. As far as shortwave is concerned, Heady Eddie, station manager of Radio Rainbow Int'l said in an interview aired on Radio Netherlands' "Media Network" programme that his station will close down by the end of the year. He said that hardly anybody who is not going to risk high fines or even imprisonment would have the chance to carry on broadcasting in 1989, the new laws seem to be some kind of "Irish MOA". Licences will certainly not be issued for shortwave broadcasters then, he mentioned. Rainbow should continue until the end of this year with weekly broadcasts on 6231 kHz including various relays.

Radio Fax which is put out on 1611/6205 kHz from the Rainbow tx site will also go off the air by December 30th when the new legislation becomes effective. Rumours say that the Scottish Free Radio Network which at the moment operates from Ireland is going to move its transmitters back to Scotland in order to keep on its services, however, only time will tell if this actually happens.

Radio Kristel International, one of Britain's veteran broadcasters, is said to be putting out its final broadcast on November 27th, 1988 on 6296 kHz. The mailing address is 294 Godstone Road, Whyteleaf, Surrey, England.

Radio Luce have celebrated their 1st birthday in October which is why they have decided to play both international and French music that month only. From November onwards there will be only French songs again. Luce hope to be testing soon on 6520 kHz which might be used as an alternative channel when the German spy station uses 7375 kHz. Tests are also planned on 25735 kHz. By the way, Radio Luce is also relayed by their French colleagues Radio Waves Int'l and Radio DJ. The broadcasts on 7374 kHz are said to be live which may be true as the DJ was heard talking about other stations he received earlier in the morning.

We now have some further details on the raid at Radio New Wave Int'l which took place on October 16th, 1988 at approximately 1110 UTC. Three members of the Dutch RCD were responsible for the bust, they confiscated the 225W tx as well as a separate modulator unit. Neither the power supply nor the audio equipment (even not the FRSH programme tapes !) were taken. After all, the raid took place in what the operator described as "in a friendly atmosphere". The RCD officials told that over the last few months there were too many Dutch stations active on shortwave, and that they would not tolerate such a lot of activity.

Offshore News. From November 5th onwards, Radio 558 is to be heard on 819 kHz thus changing its name to "Radio 819". Radio Caroline is back with a full schedule on 558 kHz. Power has been reduced, it is said to be 1 kW on 819 kHz and just 2 kW on 558 kHz. The new aerial system isn't ready yet but apparently the diplexer is.

Back to landbased activities, Radio Orion announced that they would reduce their broadcast times considerably due to lack of response over the last year. In fact, Orion's signal on the continent has gone downhill quite a bit for many months which might be one of the reasons for less listeners mail. The station has been active on various frequencies lately, ie. 6233, 6298, 6630, 6728 and last not least 6815 kHz where they were logged this morning with a test transmission. Why not drop Orion a line at PO Box 1280, Rednall, Birmingham,

Spectrum Leisure Communications (the one with the fit of laughter) have mentioned that they will be on the air again over Christmas this year with a 2-hour-tape loop running for at least a week. Listen out for them on 25795 or 25850 kHz, tx power shall be 50 watts ! The service is going to start either on Christmas Eve or Christmas Day, maybe even a bit earlier. Remember SLC's address which still is BM Broadcasting, London, WC1N 3XX, England.

"FRS Goes DX" reports in their latest issue that Super Clan Radio hope to make a comeback to shortwave some time in the future. It all depends on finding a suitable location to install and run the 60W commercial type tx connected to an inverted V aerial. When the station returns you can expect an impressive line-up of presenters including a professional female DJ from the USA. Super Clan was last heard on November 8th, 1987, the day the station was raided by the Dutch authorities.

Weekend Music Radio, 42 Arran Close, Cambridge, England, announced that they have received several reports from the USA following recent tests on 15045 kHz. For example, WMR was on the air for some 16 hours on that channel over the 4th weekend of October. As a matter of fact, the station was also mentioned on Radio Canada's "SWL Digest" programme, too !

73s & all the best until in two weeks' time from R A D I O T E L E X ...

Issue 137 / Vol. 6

November 6th, 1988

c/o Duempler Strasse 6, D-4100 Duisburg 12, West Germany.

Dear radio friends,

apologies first of all for last time's editorial, our new Greek ghost writer failed to produce something for the masses, never mind though we thought that it was quite unique nonetheless. As the temperatures go down rapidly propagation conditions seem to get better every Sunday, particularly those long distance stations (others would call that "DX") enjoy stronger signals where they wouldn't expect it. Thank you very much to everyone who contributed to this issue, especially to those 5 people who phoned in this afternoon. Deadline for issue 138 will be in two week's time again, on November 20th, the lines will be open between 1300 and 1700 UTC for anyone who might like to give us a ring.

NEWS DESK

Radio CLCG, c/o Postfach 540101, D-4100 Duisburg 11, West Germany, have told us that the station intends to be on the air every 4th Sunday of the month at 1000 UTC via the facilities of Radio Tower on 6240 kHz. The first relay was heard on Sunday, October 23rd, 1988 for two hours.

Anoraks UK reports that Radio Fax has a new QSL-card available which is quite similar to the old one in design but has been up-dated to include details of new staff members and broadcast times & frequencies. Fax is going to continue on 1611 (nighttime) and 6205 kHz (daytime) with 230 watt until the end of this year, so all those who haven't written in yet should hurry up before it's too late. The address is The Fodge, Lucks Green, Cranleigh, Surrey, GU6 7BG in England. By the way, from today onwards, 620 kHz is also used by HCJB Quito/Ecuador for its morning broadcasts to Europe, perhaps Fax should change its frequency in order to avoid QRM.

Following the recent raid of one of its relay stations, Radio New Wave, th Free Radio Service Holland (c/o Postbus 41, 7700 AA Dedemsvaart, Netherlands) has announced that the station will continue despite all the setbacks. It's not yet certain if there will be a broadcast on the 3rd Sunday of November but FRSH should be back on either December 18th or 25th with another lengthy X-mas broadcast. Your participation in that special show is highly welcome, send your written dedications or any messages spoken on tape to FRS-Holland before December 1st, 1988.

Radio Gemini, 32 Puller Road, Boxmoor, Hemel Hempstead, Heartfordshire, HP1 1QN, England, have celebrated its 16th anniversary with another 60-minute-broadcast which was put out on October 30th & November 6th, frequencies used were 6225 and 6240 kHz. The shows were also aired early the morning on both dates starting at 0600/0700 UTC for the benefit of North American DXers who were listening out for the station.

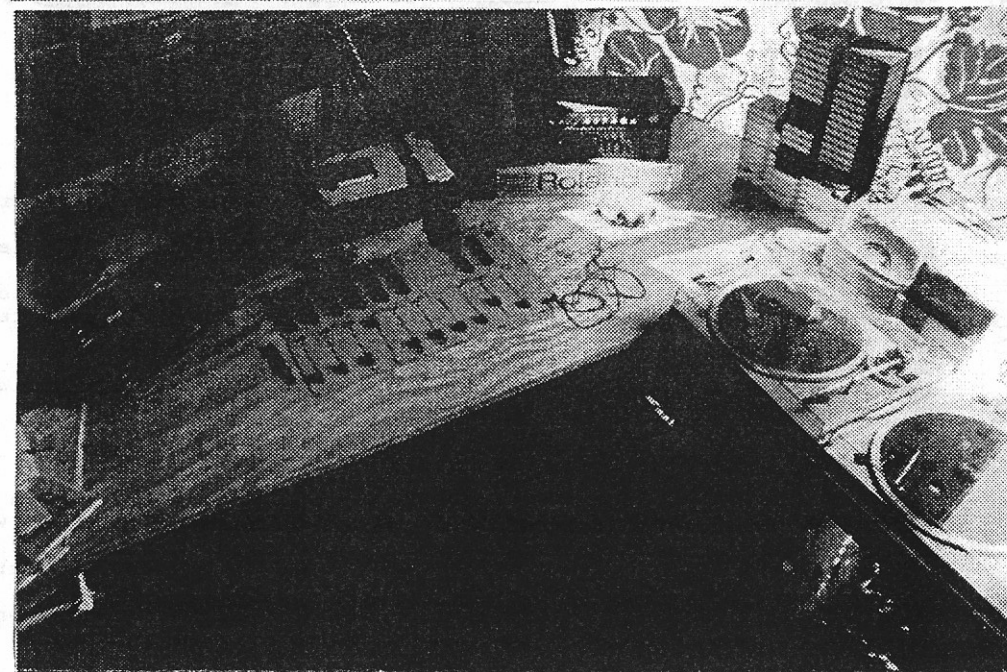

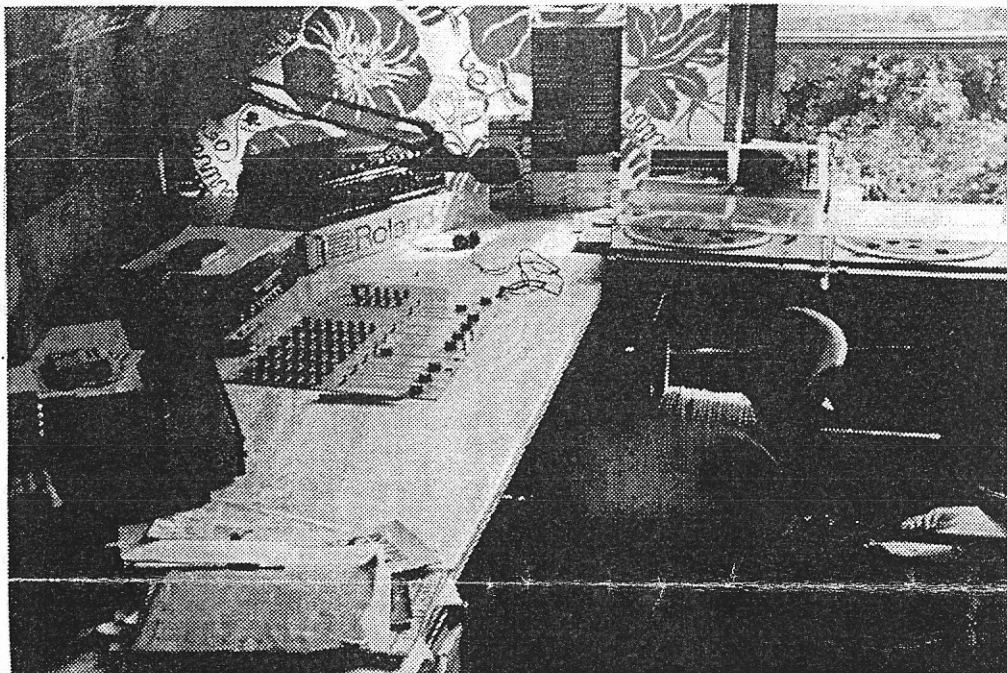

The Italian Radio Relay Service wrote in with the following information : "The construction work on our 10kW AM relay transmitter located near Milan will be accomplished by a period of extensive testing on Saturdays and Sundays. In order to make this testing period beneficial to programmers as well, we would like to invite the participation of your organization free of charge to our tests. If you wish to have your sample programmes included in our test transmissions, please let us know as soon as possible." Any stations interested should take note that they have to carefully follow the directions announced by the IRRS, ie. that during the test period all listeners must be invited to send their reception reports in care of the IRRS to the following address only: IRRS, P.O.Box 10980, Milan, Italy. After examination of listeners reports by IRRS, any letter intended for a particular programme producer will be re-mailed immediately at no cost. For further information, we advise you to write to the above address, or phone 392 2666971 (from outside Italy), a special line available for 24 hours a day.

Finally, let's have a look at the PFBS-Radio studio set-up as it is presently in use. Apart from the usual tape decks and record players it features a homemade 6-channel stereo mixer with remote control switches for the record decks as well as a Simrek stereo compressor/limiter unit. The shots were taken in May 1988.

Issue 138 / Vol. 6

November 20th, 1988

c/o Duempter StraÙe 6, D-4100 Duisburg 12, West Germany.

Hello to you all,

welcome to another edition of this magazine which as you've probably noticed is once again a bumper issue thanks to all your kind contributions and due to the fact that there is quite alot of free radio activity on shortwave these days.

As you're certainly aware of, too, we are little more than a month away from Christmas, the time of the year when most pirate stations try to get on the air. If you run a station or are associated with a free radio project, then why not let us know if your station is going to be on the air then, maybe we can help you by advertising your proposed broadcast schedule for X-mas since towards the end of the year there will be tough competition.

All regular subscribers to this magazine should find a new and updated edition of the "Radiotelex Address List" enclosed, we finally managed to get a new address directory done, and we hope to continue with this service on a more or less regular basis, about every three to four months in the future.

Before we forget, please note that deadline for RT 139 will be in two week's time again, on December 4th, 1988. For those of you who would like to phone in with your logs & news, give us a ring on that day between 1400 and 1700 UTC. By the way, it seems that the number of contributions has gradually gone down over the last few months for some reason. Please remember that without your support there is no reason for us to continue with RT since our business is non-profit-making !

A D V E R T S

"Activity" magazine's November edition is out now and contains a very detailed description of all recent free radio broadcasts heard in Europe plus a regular series on propagation as well as features on WFRL and Radio Mercury, one of the UK stations of the 78/79 pirate era. The latest issue is available for £1 cash or 5 IRCs from 3 Greenway, Harold Park, Romford, Essex, RM3 0HH, England.

Wanted. If anyone among our readership owns one of the following albums released by the German band "Ash Ra Temple" or is able to obtain them, please contact us. The albums in question are called "Ash Ra Temple", "Schwingungen" and "Join in". Write in to RT Box LP, c/o Duisburg-addr.

Offshore tape offer. The following cassette recordings of Radio Caroline and Radio 558 are for sale for just £1.50 per hour including postage and packing. Payment possible by international money order or cash. Only the twelve tapes listed below are available (no copies):

- 01) Final 30 minutes of Radio 558 followed by nonstop music, 05/11/1988, 80 minutes
 - 02) Return of the all day English service, Steve Masters, 1200-1300 BST, 05/11/1988, 60 minutes
 - 03) Chris Kennedy, 1720-1820 BST, 06/11/1988, 60 minutes
 - 04) Steve Conway, 0735-0835 BST, 06/11/1988, 60 minutes
 - 05) Steve Conway, 0840-0940 BST, 06/11/1988, 60 minutes
 - 06) Steve Masters, Dave Fisher, 1435-1535 BST, 06/11/1988, 60 minutes
 - 07) Nigel Harris, 1625-1725 BST, 06/11/1988, 60 minutes
 - 08) Steve Masters, 0709-0809 BST, 07/11/1988, 60 minutes
 - 09) Nigel Harris, 1840-1940 BST, 07/11/1988, 60 minutes
 - 10) Chris Kennedy, 2135-2235 BST, 08/11/1988, 60 minutes
 - 11) Chris Kennedy, 2235-2335 BST, 08/11/1988, 60 minutes
 - 12) Chris Kennedy, 2150-2250 BST, 09/11/1988, 60 minutes.
- Also available: "The Pirates who waive the rules" by Jay Jackson for £3.00. Please enquire at RT, Box TO (Duisburg address).

Q S L - B L A C K L I S T

The following stations haven't replied to listeners' reports after more than six months. Of course, sufficient return postage was enclosed on each occasion. It has to be mentioned though that sometimes listeners' mail has gone lost on the way from the maildrop to the actual operator.

N E W S

Radio Atlantis SW was heard once again on 6275 kHz with a 2-hour broadcast on Sunday, November 13th, 1988. During that transmission the phone lines were open for half an hour to give listeners the chance to give the station a ring. In fact, the station was quite pleased with the response from the shortwave audience, so Atlantis is going to be on 48 metres more often than in recent months. The next broadcast should take place around Christmas. Please note that apart from the usual address of 118 Kingfisher Drive, Eastbourne, Sussex, BN23 7RT, England the station can also be contacted at Postfach 220342, D-5600 Wuppertal 22, West Germany.

Radio Batida has recently started testing again on the somewhat unusual frequency of 6582 kHz where they were first logged on November 6th, 1988. According to the station, there are plans to transmit every four to six weeks on 6582 kHz (alt.: 6200 kHz) for six hours between 0800 and 1400 UTC. The DJ line-up includes Charlie Prince (Radio Joystick), Jonathan Dee (Starfleet Radio), Mike Ef (Batida's station manager) and last not least Jennifer. The correct mailing address for the station reads as follows: R.T., Drop Box Batida, Postfach 103771, D-2800 Bremen 1, West Germany. By the way, Batida specialises in black music/soul; the station had already been on the air quite regularly on 41 metres during 1983/84.

A letter received from Big K Radio tells us that the station is run just for fun by DJ J. Hurst, for instance the broadcast which went out on October 2nd, 1988 was recorded during one of his local pub gigs. At the moment, there are no QSL-cards available but they should be printed some time in the future. The name "Big K Radio" is used as Kidlington is the biggest village in England (!). With its relay outlet Radio Rainbow Int'l closing down at the end of this year, it seems very likely that also Big K Radio will pack up. Meanwhile, the address to write to is 4 Blandford Road, Kidlington, Oxford, OX5 2KN, England.

Radio East Coast Commercial, c/o P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England, is planning to have an on-air telephone link available for listeners phone calls during the live Christmas Day broadcast. The telephone number available for contacting Norman Nelson live & direct in the RECC studio will be 04583-2742. Please note that the telephone line will only be available for contacting Radio East Coast Commercial on that special day.

European Music Radio are thought to have been raided back in August, the station were QSOing and were making some provocative comments about the DTI. Who ever raided the station found no one in but managed to gain entry and went on to take equipment and left a receipt. EMR were last active when they made a broadcast on July 17th, 1988. Thanks to "Activity" magazine for this item. EMR's mailing address used to be BCM, Box 65, London WC1, England.

Here's some news on Finnish free radio stations kindly supplied by the Free Radio Campaign Finland with regards to new operations from that country.

Radio Olympia (Wuppertal maildrop) uses 6225 kHz with 15 watts of power. Radio Relax, c/o FRCF, P.O.Box 82, 40101 Jyväskylä, Finland, operates with 20 watts on 6224 kHz.

Another new station which also uses the FRCF address (see above) is the Voice of Free Radio, also on 6225 kHz with just 8 watts.

The frequency of 6225 kHz has been the most popular channel for free radio activity in Finland since 1973.

By the way, no news concerning the Right Wing Radio court case so far.

According to "Activity" magazine, Freesound Radio's station manager Mark King plans to broadcast on Christmas Day and hopes to make the transmission the best one ever from the station (have the ones before been not so good? -ed). Listeners are being asked to help with this by sending in requests for music they would like to hear to the well-known address of 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England.

FRS-Holland, c/o Postbus 41, 7700 AA Dedemsvaart, Netherlands, is going to be on the air again with another special X-mas broadcast on December 18th, 1988, as a matter of fact the eighth transmission of that kind since the station came on the air in 1980. Listeners are invited to participate in that special event by sending in their season's greetings on a sheet of paper or spoken onto cassette. Please send in your contributions before December 1st, 1988 to the address mentioned above to have your message included in the show. The tentative programme schedule for that day reads as follows:

09.00 - 09.45 FRS X-mas Party (part 1)
09.45 - 10.30 German service - Danny Kay
10.30 - 11.15 Mark Stafford X-mas special
11.15 - 12.00 "FRS Goes DX" - Peter Verbrüggen
12.00 - 13.00 FRS X-mas Party (part 2).

The programmes should go out on 48 metres, maybe also on 41 metres as well.

The Indian Ocean Broadcasting System (Bremen mailing address) has informed us that a package of listeners' mail has been lost on its way from Germany to India. Anyone who has not received a reply from the station in spite of writing in is asked to write again and to accept the station's apologies, but the incident took place due to circumstances beyond their control. In the meantime, IOBS are looking for a new relay station in Europe since their former relay station, Radio Tutenchamun, has gone silent for several months now.

Süd West Radio

Radio Limit International, c/o Postfach 220342, D-5600 Wuppertal 22, West Germany, is now going to be on the air regularly once a month through the facilities of Radio Waves Int'l from France, probably on 7440 kHz where they were logged this morning with good signals. The station has issued an info-sheet which contains the complete history of RLI. The current DJ line-up includes station manager Tommy Hopes as well as Katy, a new female DJ from East Germany (!), in addition Tom Clay should also join the station from time to time with his DX news. By the way, there is no longer a printed version of the DX-programme available due to lack of response.

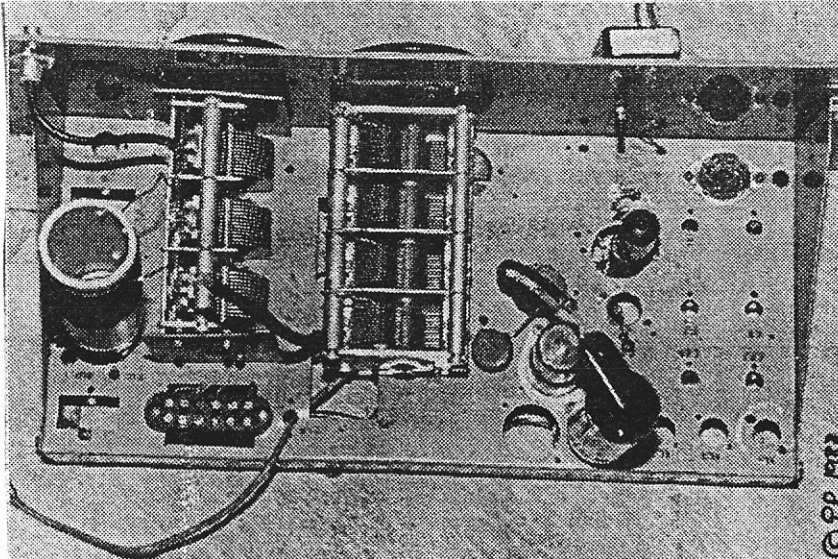

One of the few Dutch mediumwave operations currently active is Radio Orang Utan, c/o Postbus 114, 7040 AC s'Heerenberg, Holland, plans to broadcast every last Saturday night/Sunday morning of the month on 1508 kHz. However, the next broadcast which should be on November 26th/27th shall take place on 1467 kHz, certainly after the closedown of the Trans World Radio tx.

In their November edition, "Activity magazine" has some details on a QSO-operation which was logged quite often on 48 & 45 metres, Romeo Golf One which operates from Scotland, usually on 6550 kHz. The station normally comes on the air at about 1300 UTC with a cq-call. Romeo Golf One can also be heard on 6292 kHz on late night Monday with a regular QSO with Weekend Music Radio.

Back to West Germany once more, for Süd-West-Radio which were received on November 13th, 1988 testing their new type of modulation (PDM / Pulsdauermodulation), this may not have gone too well as there were quite a lot of tx breaks during the broadcast. SWR are going to have a special Christmas show some time next month which shall include listeners greetings on tape, so everyone interested should drop them a line. If those people want to have their tapes back, they should enclose at least DM 1.10 in mint stamps. The address to write to is Postfach 1203, D-6601 Heusweiler, West Germany.

PHOTO GALLERY

This time let's have a look first of all at the mediumwave transmitter used by Radio Pamela for broadcasts on 1608 kHz locally to the South East of England.

The TX features EF95 and PL519 valves. The shot was

taken in July 1988.

Italian radio relay service

IRRS SHORTWAVE AIR TESTS

The IRRS Air Tests are intended to check our complete installation (transmitter, antennas, audio processing equipment, automated studio equipment, software) by placing it in a realistic environment. Our transmitter will be located near Milan, Italy and power will be 10 kW AM. Exact frequencies will be announced soon before we start our tests. They will be chosen in the 3, 7, 9 and 13 MHz bands.

From the customers point of view, IRRS Air Tests provide an opportunity to use a new, powerful and reliable relaying service in the European Shortwave Broadcasting scenario at no cost for a limited time, to assess how it would meet their user requirements and to contribute significantly towards its development through their suggestions.

Air time for the material submitted for IRRS Air Tests purposes is granted AT NO COST for the duration of our tests only, at the discretion of IRRS Management. Customers who wish to participate to our Air Tests may send recorded material on cassette(s) tapes carefully following the directions contained in the attached "Air Tests Agreement and Technical Information".

IRRS Shortwave facility Air Tests are planned to run from the end of October 1988 for approximately four weeks. More information on schedule and duration of our Air Test will be available soon before.

A special line will be available twenty four hours a day from Oct. 17 in order for listeners to receive updated information on IRRS Relaying Services and Air Tests. You can dial the following number in Milan (Italy, country code: 39; Milan area code: 2):

phone: +39 2 2666971 from outside Italy, or:
phone: (02) 2666971 if calling from Italy.

At the same time, following the instructions on the phone, listeners will be able to leave their reception reports, allowing us to mail immediately (in most cases) a special numbered QSL card.

For more information address your correspondence by express mail to:

IRRS (Italian Radio Relay Service),
P.O. Box 10980,
20110 Milan,
Italy.

Riverside Radio Int'l are currently off the air due to a transformer in the transmitter burning out. RRI was hoping to be back on November 27th, 1988 and will be active each week until December 31st. The station plans to do a marathon broadcast during the Christmas period during which time ABC Radio (Waterford) and Jolly Roger Radio - Ireland will also be relayed. The frequency will be 6305 kHz, when BRI are using that channel Riverside will move to 6825 kHz. / Anoraks UK "Weekly Report" 238

Radio Scorpio (Utrecht maildrop) tell us that their next broadcast should take place next Sunday, December 11th, 1988 on 6238 kHz between 0900 and 1100 UTC. Scorpio have ceased their broadcasts over the Scottish Free Radio Network meanwhile. Whether Scorpio will be able to continue with a regular schedule is rather uncertain yet, however, they hope to carry on with monthly broadcasts on shortwave in spring next year.

Well-informed sources say that the Scottish Free Radio Network station which has been on 6317 kHz for several months by now has been on the air for the last time ever today.

More news from France now, Radio Star Night is the name of the medium wave service operated by Radio Waves Int'l, this should have taken place during the 2nd weekend of November when RWI celebrated its 5th birthday, however, the X-tal didn't arrive in time due to the postal strike. The frequency for mediumwave should have been 1615 kHz (not 1536). Waves continues to run a weekly service on shortwave, 7440 kHz for the time being, the transmissions on 48 metres (6271/6285 kHz) have been dropped, in fact, RWI was just testing a new tx built for another new French free radio project, the tx was producing some 25/30 watts of power. Listen out for a one-off station called Radio BNL which should go out via RWI on December 11th & 18th. The address for that as well as for Waves itself is c/o B.P. 130, 92504 Rueil Cedex, France.

The Voice of the Netherlands were saying that they use some 85/90 watts of power and are looking for a mailing address at the moment. The station seems to pop up from time to time for brief tests or QSOs. Also heard that same afternoon was another Dutch station which called itself Radio East Coast Holland. Any details on that would be welcome.

Weekend Music Radio, 42 Arran Close, Cambridge, England, inform us that they will be running an extensive programme schedule over the Christmas period with mostly live programmes plus a few taped shows. Check out for them on December 25/26/27th as well as January 1st between 0900 and 1400 UTC on 6317 kHz with 100 watts and 15045 kHz (20 watts, but maybe also 100 watts). There is a remote chance of another 20-watt-tx using 41 metres (7385, 7403, 7455, 7460 or 7465 kHz) and maybe yet another 20-watt-rig on 31 metres around 9.1/9.2 MHz or on 9910 kHz. Apart from that, there will also be loop tape tests on 15045 kHz with 100 watts between 1800 and 2300 UTC with further loop tape tests during the night 0200 - 0900 UTC. WMR will be getting new station stickers done soon, these will be reprints of the original ones which were issued in 1980. By the way, there is a chance that there will be a German service on WMR over Christmas !

Quoting "FRS Goes DX" 77, December 25th, 1988 X-mas Radio will hit the airwaves from somewhere in the Netherlands. A 100-watt-tx will be used. No mailing address is known for that one.

Well, this is it for today,
73s & FFFR
from

December 4th, 1988

c/o Duempter /Kasse 6, D-4100 Duisburg 12, West Germany.

Hi there,

welcome to another Telex which is packed with news & information on shortwave free radio (what a good slogan to start things off, hi), so let's dive into the logs first. Attention please, deadline for RT 140 will be in two weeks' time, on Sunday, December 18th, 1988. All your contributions are highly appreciated !

Due to lack of space, we shall now list the most important updaters of the previous fortnight as follows:

November 13th, 1988

6265 Radio Peter Bell / 6266 Freesound R.Int'l / 6275 Voice of the Netherlands / 6820 Westside Radio / 7316 Falcon / 7375 Waves

November 20th, 1988

6270 Radio Peter Bell / 6280 Pandora via WRI / 6308 WABC / 6625 Fox Radio / 6820 tent. 4IFR / 6820 Westside / 7316 Falcon Radio
All stations listed were logged in the UK.

NEWS DES

Radio Aquarius Int'l, c/o Postbus 65027, 3002 DA Rotterdam, Holland, are reported to have tested on November 6th, 1988 between 0700 and 0800 UTC on 48 metres even though we haven't seen any logs for that broadcast. It appears that the station's tx has been rebuilt during the summer months for broadcasts on 6 MHz (6200 - 6300 kHz), as you may remember previous transmissions earlier this year took place on about 7375 kHz. Unlike its sister station Radio Caldonia, Aquarius is going to stay on the air.

Britain Radio International are planning to put out a special broadcast on Boxing Day between 1000 and 1300 UTC. There is also the possibility of a further transmission on January 1st, 1989. The frequency on both these broadcasts will be the regular 6304 kHz. BRI are looking for listeners to send in recorded Christmas messages for the X-mas shows, these should reach their mailing addresses no later than Wednesday, December 14th. Drop them a line at 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England or Postbus 19074, 3501 DB Utrecht, Holland.

After some months of absence, the Current Pirate List is back with its bimonthly list of pirate stations' addresses on medium and shortwave, very neat and comprehensive. A copy of CPL 16 out now costs 2 IRCs or 1 US-\$ from Stefan Printz, Apelvägen 13, 33017 Rydaholm, Sweden.

According to Play-DX 524, Radio Europe is a brandnew Italian station which is currently testing in Italian, English and French on 7280 and 7295 kHz with 40 watts. There is absolutely no connection with Radio Milano Int'l, although Radio Europe operates from the Milano area. The station hopes to be heard with a regular schedule, Saturdays and Sundays 0800 - 1100 UTC. Reports may be sent to R.Europe, c/o Play-DX, Via Davanzati 8, 20158 Milano, Italy.

Anoraks UK report that Falcon Radio and Radio Susan will be running a competition beginning on November 27th, 1988. The winner will be announced "live on air" on Radio Susan's last broadcast which will be on January 1st, 1989. Falcon will continue every-week from that date on a new frequency which has yet to be chosen. The IRRS DX-programme will continue on Falcon, hosted by Tim Teesdale. As far as the competition is concerned, tune in to 7316 kHz to hear it, the price will be £ 20 of AUK merchandise. The address to write to is: MAC, P.O.Box 109, Northampton, England.

Radio Indigo (Utrecht address) were using a Dutch relay station putting out some 600 watts for their joint broadcast with Radio Pogo 104 on September 25th, 1988. Indigo have now their own transmitter, so they won't have to use relay stations in future anymore. The next official transmission of the station is expected to take place over Christmas but there may be some tests earlier on.

The Italian Radio Relay Service has finally started its series of tests on various shortwave bands. The following frequencies have been noted so far for those tests, 3945 (usually after 1500 UTC), 7145, 7160 (0800-1000), 9860 (1000-1215) and 11995 kHz. Various programme organizations have already taken the chance of participating, these include World Music Radio (PO Box 4078, Amsterdam, Holland), Radio Earth, Unesco Radio, United Nations Radio, and last not least a couple of German free radio operations, Radio Marabu and Radio Limit Int'l. In addition to that, a disco programme in the Swedish language which is said to be produced by the FRC Sweden and religious services from the USA take part in the tests. The only address to send in reports for any broadcast aired over the IRRS is P.O.Box 10980, 20110 Milano, Italy.

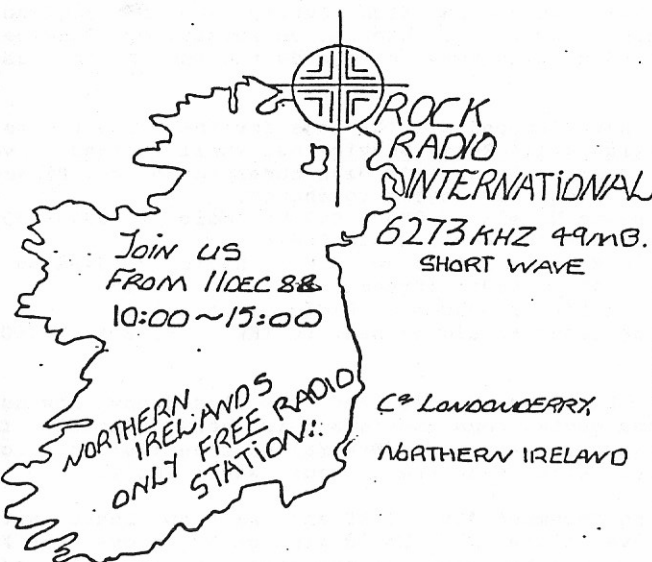

Süd-West-Radio has a new mailing address valid from December 1st, 1988 which is Postfach 1243, D-6685 Schiffweiler, West Germany. Listen out for S.W.R.'s X-mas broadcast which should start as early as 0800 UTC for a reason which listeners will find about then.

Over to France, Sunshine Radio, 58 Rue Victor Hugo, 31800 Saint Gaudens, France, made a test transmission on 7125 kHz (0745-0815 & 0835-0952 UTC) with 65 watts of power and a longwire of 40 metres. So far the station has received just five reports, all from France, in fact. A QSL-card will be issued for every correct report. The next broadcast will take place in January 1989 in the "pirate bands" of 6200-6330, 6800-6900 and 7375-7450 kHz according to "Peter Pan Pirates".

Radio Tower, c/o Postfach 19074, 3501 DB Utrecht, Holland, will put out its next regular broadcast on the 2nd Sunday of February 1989, probably on 6238 kHz. In the meantime, there should be a few test transmissions to the USA in January or early February. The frequency to check is 17422 kHz. Good luck !

W.F.R.L. Worldwide, P.O.Box 5, Hunstanton, Norfolk, PE36 5AU, England, has now issued the following schedule for their worldwide service, the next series of broadcasts should be in early January. On the 1st Saturday of the month the station is broadcasting on 9970 kHz for 24 hours as well as the following Saturday on 11155 or 11170 kHz, again for 24 hours. Apart from that, WFRL continues to operate morning broadcasts on the 1st Sunday of the month on 7385 kHz and on the 2nd Sunday on 6300 kHz. The worldwide service includes a news programme called "Worldwatch", a couple of one-hour rock shows, a 15-minute DX-show called "Media Magazine" and 45 minutes of the UK top 20 album charts. TX power is 50 watts.

Radio 48, 32 Victoria Road, Salisbury, Wiltshire, SP1 3NG, England, plans to run a biweekly service on 48 metres in 1989. Just recently, the station has been fairly active on 6312 kHz with 20 watts of power fed into a half wave dipole aerial 8 metres above the ground.

Issue 140 / Vol. 6

December 18th, 1988

c/o Duempter / Warte 6, D-4100 Duisburg 12, West Germany.

Dear radio friends,

before we get into the news & logs for the last time in 1988, please take note that the first edition of this magazine in the new year will come out on a Wednesday instead of a regular Sunday, therefore all of you may send in your written logs of Christmas and New Year's Day to us. In other words, deadline for issue 141 will be January 4th, 1989. Of course, to all of you, especially those who have continuously contributed to RT during 1988 a merry X-mas as well as a happy 1989 !

Sorry for no updaters being printed this time, perhaps we shall include them in RT 141. Final note: ABC Radio / 6275 kHz was announcing the well-known address of 118 Kingfisher Drive, Eastbourne, Sussex, England.

NEWS

Radio Batida told us that the station is on the air with an average amount of two broadcasts per month on 6582 kHz. At present, a 20-watt-tx is used along with a horizontally polarized Delta loop aerial. Power shall be increased some time next year up to some 80-90 watts. The current programme line-up now reads as follows:
0800 UTC Nonstop music / 0900 UTC Soul show (Mike Ef) / 1100 UTC Malibox (Jenny T. & Mike Ef) / 1200 UTC Jonathan Dee show / 1300 UTC Charlie Prince show / 1500 UTC Closedown.
Please note that all letters should be addressed to this address: R.T., Drop Box Batida, c/o Postfach 103771, D-2800 Bremen 1, West Germany.

Another German operation called Radio Charline, c/o Postbus 65027, 3002 DA Rotterdam, Holland, continues to be relayed over the powerful 250-watt-tx of Radio New Wave from Holland (back after the raid in October !). Charline plans to build an own tx some time in the future to transmit on an irregular basis then. By the way, the station made its debut on March 27th, 1988 via Radio Caldonia but only received one letter for that broadcast as well as for the one on April 4th. As a matter of fact, the station's QSL is about the worst we've seen for a long time ...

Radio Claymore, c/o Postfach 220342, D-5600 Wuppertal 22, West Germany, started its regular programmes December 11th on 6225 kHz at 0815 UTC. The station tries to bring shows with less popular music such as folk, electric folk, blues and certain rock music. DJs presenting programmes for the station are still asked to get in touch through the above address.

Apologies to Radio East Coast Commercial whose phone number was printed incorrectly in RT 138, the actual number to ring the station during its Christmas Day broadcast is 04853-2742 (the complete number to dial from West Germany is 0044-4853-2742). The next DX-programme will go out on the 2nd Sunday in January 1989 instead of the usual 1st Sunday, on 6815 kHz.

Radio Fax, The Fodge, Lucks Green, Cranleigh, Surrey, GU6 7BG, England, is reported to have dropped its news & information format by December 15th and will continue with a music service towards the end of the year on 1611/6205 kHz.

Due to lack of space, we have dropped all the logs for the current test transmissions of the Italian Radio Relay Service but shall instead give you the station's programme schedule as it's been observed so far. Please note that this schedule is of course subject to change.

7160 kHz 0800-0830 "La Buena Novela" / 0830-0900 UN Radio / 0900-0930 Unesco Radio / 0930-1000 World Music Radio
9860 kHz 1000-1100 Radio Earth / 1100-1130 Disco Radio - Swedish service / 1130-1215 UN Radio (French, Spanish, Italian)
1300-1330 Radio Marabu / 1330-1400 Radio Limit Int'l.

Remember all mail for those tests should be sent to IRRS, PO Box 10980, 20110 Milano, Italy.

KIWI Radio, PO Box 1437, Hastings, New Zealand, has closed down now due to increased domestic and social commitments and is very unlikely to return in the future. Meanwhile, the other New Zealand free radio station 4IFR hopes to continue with relays over French Radio Waves Int'l.

KLA-Radio has returned on December 4th, 1988 and has been heard with weekly shows on 6260 kHz ever since. KLA should also be heard over the X-mas period. The mailing address has remained the same, it is still c/o B.M.Broadcasting, London, WC1N 3XX, England.
